Combat Casualty
Care (TCCC) has
saved hundreds of
lives during our
nation's conflicts in
Iraq and
Afghanistan. Nearly
90 percent of
combat fatalities
occur before a
casualty reaches a
medical treatment
facility. Therefore,
the prehospital
phase of care is
needed to focus on
reducing the
number of combat
deaths. However,
few military

physicians have had
training in this area
and, at the onset of
hostilities, most
combat medics,
corpsmen, and
pararescue
personnel in the
U.S. military have
been trained to
perform battlefield
trauma care
through civilian-
based trauma
courses. These
courses are not
designed for the
prehospital combat
environment and do
not reflect current
practices in the
area of prehospital
care. TCCC was
created to train
Soldiers and
medical personnel
on current best
practices for
medical treatment
from the point of
injury to evacuation

Pediatric First Aid, CPR, and AED Sep 08 2020 Pediatric First Aid, CPR, and AED is a first edition product for McGraw-Hill Higher Education. Part of a series of titles authored by the National Safety Council, Pediatric First Aid, CPR, and AED covers the material required in a Standard First Aid, CPR and AED course. The focus is teaching the layperson to recognize and act in any pediatric emergency and to sustain life until professional help can arrive. Quality content features information based on the current national guidelines for breathing and cardiac emergencies. Other information

includes bleeding control, and first aid for sudden illnesses and injuries. Focus is also on preventing injury and illness in children and the first aid for common illnesses and injuries that children sustain. Information is presented in a concise easy -to-read manner that works as a handy reference after the course. National Safety Council programs and products are designed to benefit all types of learning styles by combining lectures, video presentations, group discussions, and hands-on training.

based on the 2005 Consensus on Science for CPR and Emergency Cardiovascular Care (ECC) and the Guidelines 2005 for First Aid. Changes to this program and manual include simplifications to many of the CPR skill sequences, which helps improve retention. There have also been changes to help improve the quality of CPR. The integration of CPR skills into the operation of AEDs had changed to help improve survival from sudden cardiac arrest. Professional rescuers are now trained to use AEDs on adults and children. Information has been updated and added to this

program to help professional rescuers administer epinephrine, aspirin and fixed-flow-rate oxygen. The skills learned in this course include adult, child and infant rescue breathing, conscious and unconscious choking, CPR, two-rescuer CPR and adult and child AED. Additional training can be added to this course including bloodborne pathogens training and emergency oxygen administration. While the skills and knowledge that professional rescuers use are increasing, this training will help you meet your most important responsibility as a

professional rescuer- the responsibility to save lives.

Swimming and Water Safety Jul 31 2022 Discusses the history and techniques of swimming and diving, safety rescue techniques, and skills for a variety of aquatic activities.

Strategies to Improve Cardiac Arrest Survival

Aug 08 2020

Cardiac arrest can strike a seemingly healthy individual of any age, race, ethnicity, or gender

at any time in any location, often without warning. Cardiac arrest is the third leading cause of death in the United States, following cancer and heart disease. Four out of five cardiac arrests occur in the home, and more than 90 percent of individuals with cardiac arrest die before reaching the hospital. First and foremost, cardiac arrest treatment is a community issue - local resources and personnel must provide appropriate, high-quality care to save the life of a community member. Time between onset of arrest and provision of care is fundamental, and shortening this time

is one of the best ways to reduce the risk of death and disability from cardiac arrest. Specific actions can be implemented now to decrease this time, and recent advances in science could lead to new discoveries in the causes of, and treatments for, cardiac arrest. However, specific barriers must first be addressed. Strategies to Improve Cardiac Arrest Survival examines the complete system of response to cardiac arrest in the United States and identifies opportunities within existing and new treatments, strategies, and research that promise to improve the survival and

recovery of patients. The recommendations of Strategies to Improve Cardiac Arrest Survival provide high-priority actions to

advance the field as a whole. This report will help citizens, government agencies, and private industry to improve health

outcomes from sudden cardiac arrest across the United States.
