*Griffith Review* 61 Jun 28 2019 Prime Minister Malcolm Turnbull celebrates Australia as 'the most successful multicultural nation in the world'. This is a grand claim and important to a sense of identity and belonging, but at times it seems that multiculturalism is more an article of faith than a work in progress. What it really means in the twenty-first century is the focus of *Griffith Review* 61: *Who We Are*, which will examine both the opportunities offered and the complexities involved. The nation's population has virtually doubled since 1975, and in recent years the rules around migration have been altered significantly. Those who have chosen to make their home here in the past have changed Australia, and waves of new arrivals continue to transform the country. Yet the apparent certainties of Australia as a permanent settler society are giving way to the precarious churn of temporary migration. This edition will give voice to this changing reality, explore the big issues of belonging, citizenship and participation, and tease out how contemporary Australia might evolve. This is a rich field, replete with policy questions and personal narratives. It is a success story, but the full picture is complex, and past achievements no guarantee of future results. The nation's boundaries are imaginary as much as physical, and constantly contested by an unsettled history and a shifting present. Renewed assertions of national identity run parallel to the increasing globalisation of opportunity and threat, as if the more fluid the world becomes, the greater the urge to hold onto something fixed and stable. Yet do we really know who 'we' are? Where does Australia begin and end? Who can claim to belong and who can be legitimately excluded? Julianne Schultz AM FAHA is the founding editor of *Griffith Review*, the award-winning literary and public affairs quarterly journal. Peter Mares is contributing editor with the online magazine *Inside Story* and senior moderator with *The Cranlana Programme*. Peter was a broadcaster with the ABC for twenty-five years, and is the author of two books - the award-winning *Borderline: Australia's Response to Refugees and Asylum Seekers in the Wake of the Tampa* and *Not Quite Australian: How Temporary Migration Is Changing the Nation*. 'An eclectic, thought-provoking and uniformly well-written collection.' Australian 'This is commentary of a high order. The prose is unfailingly polished; the knowledge and expertise of writers impressive.' *Sydney Morning Herald* 'For intelligent, well-written quarterly commentary...*Griffith Review* remains the gold standard.' *Honest History*

**The Rise and Development of FinTech** Dec 03 2019 This comprehensive guide serves to illuminate the rise and development of FinTech in Sweden, with the Internet as the key underlying driver. The multiple case studies examine topics such as: the adoption of online banking in Sweden; the identification and classification of different FinTech categories; process innovation developments within the traditional banking industry; and the Venture Capital (VC) landscape in Sweden, as shown through interviews with VC representatives, mainly from Sweden but also from the US and Germany, as well as offering insight into the companies that are currently operating in the FinTech arena in Sweden. The authors address questions such as: How will the regulatory landscape shape the future of FinTech companies? What are the factors that will likely drive the adoption of FinTech services in the future? What is the future role of banks in the context of FinTech and digitalization? What are the policies and government initiatives that aim to support the FinTech ecosystem in Sweden? Complex concepts and ideas are rendered in an easily digestible yet thought-provoking way. The book was initiated by the IIS (the Internet Foundation in Sweden), an independent organization promoting the positive development of the Internet in the country. It is also responsible for the Internet's Swedish top-level domain .se, including the registration of domain names, and the administration and technical maintenance of the national domain name registry. The book illustrates how Sweden acts (or does not act) as a competitive player in the global FinTech arena, and is a vital addition to students and practitioners in the field.

*On-Chip Instrumentation* Apr 06 2020 This book provides an in-depth overview of on chip instrumentation technologies and various approaches taken in adding instrumentation to System on Chip (ASIC, ASSP, FPGA, etc.) design that are collectively becoming known as Design for Debug (DfD). On chip instruments are hardware based blocks that are added to a design for the specific purpose and improving the visibility of internal or embedded portions of the design (specific instruction flow in a processor, bus transaction in an on chip bus as examples) to improve the analysis or optimization capabilities for a SoC. DfD is the methodology and infrastructure that surrounds the instrumentation. Coverage includes specific design examples and discussion of implementations and DfD tradeoffs in a decision to design or select instrumentation or SoC that include instrumentation. Although the focus will be on hardware implementations, software and tools will be discussed in some detail.
