Mindfulness for Life Jul 19 2021 Mindfulness is a form of mental training that has been widely practised for millennia, however it's only recently that science and clinical practice have discovered the profound potential of mindfulness-based practices for increasing our wellbeing. Our tendency to not be fully present in life has vast implications. Being unmindful means wasting our lifetime, missing important information, increasing our risk of physical and social accidents and communicating more superficially with other people. Importantly, it makes us unhappier than we realize and vulnerable to stress and poor mental health. By focusing on what is rather than be distracted by what isn't mindfulness can make us much calmer, happier and healthier beings. *Mindfulness for Life* is the only book you will ever need on mindfulness. It shows you how to apply mindfulness techniques to your own life whether you need help with medical conditions, personal development or spiritual development. Chapters are included on: stress and ageing, anxiety, depression, addiction, attention deficit disorders, pain, weight management, eating disorders, heart disease and stroke, cancer, dementia and sleep; lifestyle, education, workplace, parenting and sporting enhancement; and self actualization, happiness and enlightenment development. *Mindfulness for Life* is written by two experts in the field who bring the medical perspective of an international authority on mindfulness and the psychological perspective of a researcher. The result is a book that translates the scientific principles behind mindfulness into a simple, practical and accessible manual to applying mindfulness - for life.

Occupancy Estimation and Modeling May 29 2022 *Occupancy Estimation and Modeling: Inferring Patterns and Dynamics of Species Occurrence, Second Edition*, provides a synthesis of model-based approaches for analyzing presence-absence data, allowing for imperfect detection. This provides an improved insight about species and community ecology, including, detection heterogeneity; correlated detections; spatial autocorrelation; multiple states or classes of occupancy; changes in occupancy over time;

species co-occurrence; community-level modeling, and more. *Occupancy Estimation and Modeling: Inferring Patterns and Dynamics of Species Occurrence, Second Edition* has been greatly expanded and detail is provided regarding the estimation methods and examples of their application are given. Important study design recommendations are also covered to give a well rounded view of modeling. Provides authoritative insights into the latest in occupancy modeling Examines the latest methods in analyzing detection/no detection data surveys Addresses critical issues of imperfect detectability and its effects on species occurrence estimation Discusses important study design considerations such as defining sample units, sample size determination and optimal effort allocation

It presents detailed information on the methods of solutions to problems and the results obtained. Also given within the text is a summary of each of the principal analysis techniques inherent in the design process and where appropriate, an explanation of the mathematical models used. The text emphasises that software should only be used if designers have the appropriate knowledge and understanding of the mathematical modelling, assumptions and limitations inherent in the programs they use. What's New in the Second Edition: New chapters cover the development and use of influence lines for determinate and indeterminate beams, as well as the use of approximate analyses for indeterminate pin-jointed and rigid-jointed plane-frames. This edition includes a rewrite of the chapter on buckling instability, expands on beams and on the use of the unit load method applied to singly redundant frames. The x-y-z co-ordinate system and symbols have been modified to reflect the conventions adopted in the

structural Eurocodes. William M. C. McKenzie is also the author of six design textbooks relating to the British Standards and the Eurocodes for structural design and one structural analysis textbook. As a member of the Institute of Physics, he is both a chartered engineer and a chartered physicist and has been involved in consultancy, research and teaching for more than 35 years.

Perform or Else Jun 05 2020 'Performance' has become one of the key terms for the new century. But what do we mean by 'performance'? In today's world it can refer to experimental art; productivity in the workplace; and the functionality of technological systems. Do these disparate fields bear any relation to each other? In Perform or Else Jon McKenzie asserts that there is a relationship cultural, organisational, and technological performance. In this theoretical tour de force McKenzie demonstrates that all three paradigms operate together to create powerful and contradictory pressures to 'perform...or else'. This is an urgent and important intervention in contemporary critical thinking. It will profoundly shape our understanding of twenty-first century structures of power and knowledge.

The Fear In Her Eyes Aug 27 2019 From internationally-acclaimed thriller writer Grant McKenzie comes a novel that hits perilously close to home, and will keep you guessing until the last page. What if everything you believed about the worst event in your life was a lie? Ian Quinn's day begins with an anonymous death threat, but that's not entirely unusual in his line of work as a court-ordered child protection officer. The frustrated parents of his clients often need someone to lash out at — and Ian makes sure that he is the easiest target. But the threat is nothing compared to the envelope stuffed into his hand by a foul-smelling vagrant who mutters the cryptic message, "He says he's sorry" before scurrying away. The envelope with his name scrawled across the front contains a lone visitor's pass to the Oregon State Penitentiary, and the accompanying message fills Ian's heart with both terror and revulsion. The author of the note destroyed Ian's life. In the blink of an eye, this drunk-driving scum took the most precious thing in Ian's life. Worst of all, Ian had watched it happen. And now the bastard wants to see him. The message is short. Only seven words. I was paid to kill your daughter.

The Book of Why Oct 29 2019 A pioneer of artificial intelligence shows how the study of causality revolutionized science and the world 'Correlation does not imply causation.' This mantra was invoked by scientists for decades in order to avoid taking positions as to whether one thing caused another, such as smoking and cancer and carbon dioxide and global warming. But today, that taboo is dead. The causal revolution, sparked by world-renowned computer scientist Judea Pearl and his colleagues, has cut through a century of confusion and placed cause and effect on a firm scientific basis. Now, Pearl and science journalist Dana Mackenzie explain causal thinking to general readers for the first time, showing how it allows us to explore the world that is and the worlds that could have been. It is the essence of human and artificial intelligence. And just as Pearl's discoveries have enabled machines to think better, *The Book of Why* explains how we can think better.

Place in Research Jan 31 2020 Bridging environmental and Indigenous studies and drawing on critical geography, spatial theory, new materialist theory, and decolonizing theory, this dynamic volume examines the sometimes overlooked significance of place in social science research. There are often important divergences and even competing logics at work in these areas of research, some which may indeed be incommensurable. This volume explores how researchers around the globe are coming to terms - both theoretically and practically - with place in the context of settler colonialism, globalization, and environmental degradation. Tuck and McKenzie outline a trajectory of critical place inquiry that not only furthers empirical knowledge, but ethically imagines new possibilities for collaboration and action. Critical place inquiry can involve a range of research methodologies; this volume argues that what matters is how the chosen methodology engages conceptually with place in order to mobilize methods that enable data collection and analyses that address place explicitly and politically. Unlike other approaches that attempt to superficially tag on Indigenous concerns, decolonizing conceptualizations of land and place and Indigenous methods are central, not peripheral, to practices of critical place inquiry.
