Transcatheter Valve Repair Dec 26 2021 Transcatheter Valve Repair discusses all aspects related to percutaneous and established valve repair methods. The book is divided into few major sections covering all four valves and other topics. Each section contains several chapters discussing everything related to that valve. Beginning with the pulmonary valve, since it was the first valve to be tackled in the catheterization laboratory, and then moving to the aortic, then the mitral and then finally end with the tricuspid valve. 1.5M US citizens alone have some degree of aortic valve stenosis, with half (750K) requiring aortic valve replacement. Aortic valve replacement, on the whole, is performed by surgeons, requiring bypass machines and technicians, as well as the usual operating team. The operation is expensive and occupies a considerable amount of operating room time. Mostly, the aortic valve is calcified and the usual option available to patients is valve replacement with a variety of choices, ranging from porcine valves to synthetic, for which there are many manufacturers. It should be noted that the aortic valve is the most problematic of valves. Percutaneous procedures are the answer. The bottom line is that given the growing elderly population, many more patients will require valve repair, thus increasing health care costs with not only surgical operations but also hospitalisation. Percutaneous valve repair, whilst requiring a cath lab team, does not involve bypass machines nor extended hospitalisation. Like percutaneous transluminal coronary artery interventions (PTCA) has replaced coronary artery bypass grafts (once the golden standard), and now stenting having replaced PTCA and its balloons. We now see drug eluting stents replacing ordinary stents (though at a much higher cost. There will be a huge movement toward percutaneous valve repair, which should presumably cut costs but also morbidity and mortality.

Manual of Neonatal and Paediatric Congenital Heart Disease Aug 10 2020 A number of books have been written relating to congenital heart disease, but generally, they reflect individualised medical management of local practice and philosophies. Although this book assumes a prior working knowledge of congenital heart disease, it aims to provide the reader with a reference guide to be utilised at the bedside. The main aspiration of this book is to provide a comprehensive, affordable guide for paediatric, neonatal and adult nurses of young people with congenital heart disease, in this highly challenging speciality. This book is primarily written for nursing staff focusing on a multidisciplinary team approach to managing children. It is also a valuable tool for community staff, dieticians, doctors, neonatal staff, perfusionists, pharmacists, physiological measurement technicians, physiotherapists, psychologists, social workers, theatre staff, and other personnel who come into contact with this group of children.
