Number Theory Jun 19 2021 This volume contains a collection of articles from the meeting of the Canadian Number Theory Association held at the Centre de Recherches Mathematiques (CRM) at the University of Montreal. The book represents a cross section of current research and new results in number theory. Topics covered include algebraic number theory, analytic number theory, arithmetic algebraic geometry, computational number theory, and Diophantine analysis and approximation. The volume contains both research and expository papers suitable for graduate students and researchers interested in number theory.

Proceedings of the International Conference on Colloid and

Surface Science Apr 29 2022 The purpose of this Conference was to discuss the results of recent developments and the future prospect in science and technology of the field. The field has been growing and flourishing, while indicating many problems to be uncovered and solved. The conference was structured to encourage interaction and to stimulate the exchange of ideas to accomplish the above purpose. Key issues and materials related

Dynamics of Parallel Robots Mar 17 2021 This book

establishes recursive relations concerning kinematics and dynamics of constrained robotic systems. It uses matrix modeling to determine the connectivity conditions on the relative velocities and accelerations in order to compare two efficient energetic ways in dynamics modeling: the principle of virtual work, and the formalism of Lagrange's equations. First, a brief fundamental theory is presented on matrix mechanics of the rigid body, which is then developed in the following five chapters treating matrix kinematics of the rigid body, matrix kinematics of the composed motion, kinetics of the rigid body, dynamics of the rigid body, and analytical mechanics. By using a set of successive mobile frames, the geometrical properties and the kinematics of the vector

system of velocities and accelerations for each element of the robot are analysed. The dynamics problem is solved in two energetic ways: using an approach based on the principle of virtual work and applying the formalism of Lagrange's equations of the second kind. These are shown to be useful for real-time control of the robot's evolution. Then the recursive matrix method is applied to the kinematics and dynamics analysis of five distinct case studies: planar parallel manipulators, spatial parallel robots, planetary gear trains, mobile wheeled robots and, finally, two-module hybrid parallel robots.

Quseir Al-Qadim 1980 Feb 25 2022 This volume presents the results of the second season of excavations, during which a Roman merchant's "villa" and part of the central administrative buildings were excavated. A large section of the Islamic town was also cleared, within which were artifacts ranging from China to West Africa. This report presents the excavations and the artifacts recovered; these latter include the pottery, glass, lamps, Roman ostraca and Arabic letters, fauna, flora, shells, and organic materials, the latter including textiles, wood, leather, and basketry. Also included are brief reports on the survey of Bir Kareim, the site of a Roman gold mining settlement and shrine about 20km from the port, and a discussion of the old mosques in the modern town of Quseir. "Would that all archaeologists were as generous with their material, as prompt in publication and as well organized in presentation as these."--Oliver Watson, Bulletin of the School of Oriental and African Studies

The Key to Technical Translation May 07 2020 This handbook for German/English/German technical translators at all levels from student to professional covers the root terminologies of the spectrum of scientific and engineering fields. The work is designed to give technical translators direct insight into the main error sources occurring in their profession, especially those resulting from a poor understanding of the subject matter.

usage of particular terms to designate different concepts in different branches of technology. The style is easy to read and suitable for nonnative English speakers and translators with no engineering experience. Volume 1 presents a comprehensive systematic description of the basic concepts underlying all branches of technology: Electrical, Mechanical and Chemical Engineering, Materials, Science, Electronics, Nucleonics, Aeronautics, Computers, Automobiles, Plastics and other important fields. Volume 2 expands this terminology with the aid of a Technical Thesaurus and a set of structured bilingual dictionaries which draw attention to specific English/German errors, usage of technical vocabulary and to collocations of general vocabulary in engineering contexts. The two volumes combine 3 major areas: 1. Technical Translation, 2. General Linguistics and 3. Computational Lexicography, possibly indirectly marking the birth of a new discipline "Technical Linguistics". The book is designed for practical as well as academic use, for translator trainers, practicing translators, applied linguists, and professional engineers and scientists working with English/German documentation. "There is so much material there that the books will not only be wanted by English/German/English translators, but the English basis on its own will be attractive to other language orientations involving English" Juan C. Sager (UMIST, Manchester)

Aspects of Orality and Formularity in Gregorian Chant Oct 04 2022 A study of medieval monophonic music. The text focuses on its movement away from the concept of chants as products and towards the idea of chants as processes. The essays are loosely connected through their bearing on one or more of three themes: the role of orality in the transmission of chants circa 700-1400; varying degrees of stability or instability in the transmission of chant; and the role of the formula in the construction of chant.

sales of land by Attic corporate groups (demes, phratries etc.) to individual Athenian citizens in the 4th century B.C., are an important source for the social and economic history of classical Athens. Although some of the fragments have been known for over a century, this book is the first comprehensive edition. In addition to a new fragment, published here for the first time, it contains revised texts of the 15 fragments already known, based on a fresh autopsy of the stones. This has resulted in many new readings and a new arrangement of the fragments into stelai. A translation in tabular form is followed by a textual and epigraphical commentary and full notes on the 150+ individuals and the 60+ corporate groups mentioned in the records, a number of them identified for the first time. Prosopographical analysis enables likely dates for the sales to be established to within a few years. This forms the basis for a final discussion chapter, which identifies the inscriptions as records of a centrally organised land sale programme probably attributable to the leading Athenian financial administrator, Lykourgos.

Transnational European Union Dec 26 2021 At the beginning of the twenty-first century, the European Union is an increasingly dense transnational social and political space. More and more non-governmental organisations develop transnational links, which are usually more intensive within the EU, even if they often extend beyond its borders to the wider world. This multi-disciplinary volume explores the importance of these structures, actors and relations for EU and European governance in the context of the theoretical debate about European integration in the social sciences. This book delivers: theoretical chapters examining and discussing the main conceptual perspectives to studying the transnational EU to provide a current overview empirical case studies of transnationalism in practice on transnational party, trade union and police cooperation to transnational education policy-making and transnational

Climber's Guide to Devil's Lake Sep 22 2021 The new edition of Climber's Guide to Devil's Lake is your guide to the fractures, cracks, ledges, slabs, chimneys, and other rock formations of Devil's Lake State Park, the most popular climbing spot in the Midwest. This bible for climbers locates and describes more than 1600 climbs. With more than 10,000 copies of the first edition in print, this handy volume remains the only comprehensive guide to climbing in the panoramic park located near Baraboo, Wisconsin. It describes many more climbs on recently acquired park land as well as in relatively unknown areas, encouraging exploration of new routes to decrease the overuse of, and damage to, the most popular areas. Major changes in the new edition include revisions of the hiking trail descriptions, the climbing safety and ethics sections, and the rating system, which has been changed from the National Climbing Classification System to the Yosemite Decimal System. A new chart compares these two systems to others. This edition is useful to climbers of all abilities and preferences, and the book's excellent organization, along with fifty-nine new and revised diagrams, eleven maps, and twenty-two photographs, enable both novices and experts to locate challenging routes easily. Author "Olle" Swartling draws on his own forty years of climbing experience at Devil's Lake and elsewhere, comments from other climbers, and information from out-of-print guidebooks to improve this edition, retaining the informative geologic and natural history of the Baraboo hills contributed by Patricia K. Armstrong.

the U.S. and E.U. antitrust legality of mergers, joint ventures, and the pricing-technique and contractual/sales-policy distributor-control surrogates for vertical integration and (2) assess related positions of scholars and U.S. and E.U. antitrust officials. Its analysis of horizontal mergers (1) delineates non-market-oriented protocols for determining whether they manifest specific anticompetitive intent, would lessen competition, or are rendered lawful by the efficiencies they would generate, (2) criticizes the U.S. courts' traditional market-share/market-concentration protocol, the HHI-oriented protocols of the 1992 U.S. DOJ/FTC Guidelines and the European Commission (EC) Guidelines, and the various non-market-oriented protocols the DOJ/FTC have increasingly been using, (3) argues that, although the 2010 U.S. Guidelines and DOJ/FTC officials discuss market definition as if it matters, those Guidelines actually reject market-oriented approaches, and (4) reviews the relevant U.S. and E.U. case-law. Its analysis of conglomerate mergers (1) shows that they can perform the same legitimate and competition-increasing functions as horizontal mergers and can yield illegitimate profits and lessen competition by increasing contrived oligopolistic pricing and retaliation barriers to investment, (2) analyzes the determinants of all these effects, and (3) assesses limit-price theory, the toe-hold-merger doctrine, and U.S. and E.U. case-law. Its analysis of vertical conduct (1) examines the legitimate functions of each type of such conduct, (2) delineates the conditions under which each manifests specific anticompetitive intent and/or lessens competition, and (3) assesses related U.S. and E.U. case-law and DOJ/FTC and EC positions. Its analysis of joint ventures (1) explains that they violate U.S. law only when they manifest specific anticompetitive intent while they violate E.U. law either for this reason or because they lessen competition, (2) discusses the meaning of an "ancillary restraint" and demonstrates that whether a joint-venture agreement would be illegal if it imposed no restraints and whether any restraints imposed are

can be determined only through case-by-case analysis, (3) explains why scholars and officials overestimate the economic efficiency of R&D joint ventures, and (4) discusses related U.S. and E.U. case-law and DOJ/FTC and EC positions. The study's Conclusion (1) reviews how its analyses justify its innovative conceptual systems and (2) compares U.S. and E.U. antitrust law as written and as applied.

Das Lexikon deckt in 8000 Einträgen, 500 Tabellen und 745 Abbildungen nahezu alle Kern- und Randgebiete der klinischen Chemie ab. Die von führenden Experten erstellten Einträge behandeln nicht nur labormedizinische Kenngrößen, sondern auch alle eingesetzten Analysenmethoden, Begriffe zur Labor-EDV, Statistik, Vorschriften und Richtlinien, historische Tests sowie wichtige Persönlichkeiten. Die Neuauflage wurde vollständig überarbeitet, aktualisiert und um Stichwörter zur Infektionsserologie und Transfusionsmedizin erweitert.

Quseir Al-Qadim 1978 Jul 01 2022 The results of the first season of archaeological excavations at the small port site of Quseir al-Qadim on the Red Sea are presented in this volume.

Archaeological evidence testifies to the importance of this port, then called Leukos Limen, for the Roman trade in the Indian Ocean in the first and second centuries a.d. After a millennium of abandonment, this trade was revived under the Mamluks (thirteenth-fourteenth centuries), when the trade reached East Africa, India, and China. This report presents copious illustrations of the artifacts of daily life in these two periods. A chapter by Martha Prickett presents the detailed results of a regional survey around Quseir and along the route leading to Luxor and the Nile valley.

Historic Aircraft Wrecks of San Bernardino County May 19 2021

Weather, darkness and twists of fate have contributed to more than three hundred airplane crashes in San Bernardino County, California. Many of these accidents occurred in the vast Mojave Desert, others on the cloud-shrouded, snow-capped mountains of the largest county in the lower forty-eight states. Searches often were labored yet fruitless, even for the privileged: Frank Sinatra's mother perished here in a downed plane. The quest for an aircraft containing \$5,000 in cash has become the stuff of legend. Tales of survival in uninhabited, rugged landscapes have been especially harrowing. Join renowned aircraft-crash search specialist G. Pat Macha for dozens of sorrowful, triumphant, touching and surprising true stories of those who lived through the ordeals of plane crashes--and others who didn't.
