The State of the University, 2000-2008 Oct 10 2020 Beginning with his installation as chancellor on University Day, 2000, James Moeser started each academic year with a major address in which he outlined his envisioned agenda for the year ahead. In retrospect, these addresses can be read as guideposts to mark the history of Carolina's first decade of the twenty-first century, a period of great progress. A common thread running through all of these addresses is a call for excellence--that Carolina should be America's leading public university with a commitment to public engagement and social justice and that Carolina should be both great and good. Moeser did not shy away from controversy in these addresses, stoutly defending academic and First Amendment freedoms. The book concludes with two addresses given after his term in office, one that offers an overview of his administration, and a second, his brief remarks at the unveiling of his portrait, which is reproduced on the cover of this book. An open access edition of *The State of the University, 2000-2008* is available through a partnership with the University of North Carolina at Chapel Hill Library.

Desiring TESOL and International Education Nov 10 2020 This book addresses how Western universities have constructed themselves as global providers of education, and are driven to be globally competitive. It examines how the term 'international' has been exploited by the market in the form of government educational policies and agencies, host institutions, academia and the mass media. The book explores matters relating to the role of the English language in international education in general and the field of TESOL in particular. It demonstrates how English and TESOL have exercised their symbolic power, coupled with the desire for international education, to create convenient identities for international TESOL students. It also discusses the complexity surrounding and informing these students' painful yet sophisticated appropriation of and resistance to the convenient labels they are subjected to.

London's Grand Guignol and the Theatre of Horror Aug 27 2019 London's Grand Guignol—a macabre theatre of naturalistic horror—was established in the early 1920s at the Little Theatre in the West End. Taking its cue from Le Théâtre du Grand-Guignol in Paris, this high-profile venture enjoyed as much critical controversy as popular success. On its side were some of the finest actors of the English stage, such as Sybil Thorndike and Lewis Casson, as well as a team of extremely able writers, including the legendary Noël Coward. London's Grand Guignol and the Theatre of Horror considers the importance and influence of the Grand Guignol within its social, cultural, and historical contexts, while presenting a selection of ten remarkable Grand Guignol plays, several of which were banned by the Lord Chamberlain, the censor of the day, and have never been publicly performed—including a previously unpublished work by Coward. The companion volume to *Grand-Guignol: The French Theatre of Horror*, already in its third edition, this book is an essential addition to any gore-loving student of drama and the twentieth-century theatre of horror.

Aluminum Dreams Oct 29 2019 How aluminum enabled a high-speed, gravity-defying American modernity even as other parts of the world paid the price in environmental damage and political turmoil. Aluminum shaped the twentieth century. It enabled high-speed travel and gravity-defying flight. It was the material of a streamlined aesthetic that came to represent modernity. And it became an essential ingredient in industrial and domestic products that ranged from airplanes and cars to designer chairs and artificial Christmas trees. It entered modern homes as packaging, foil, pots and pans and even infiltrated our bodies through food, medicine, and cosmetics. In *Aluminum Dreams*, Mimi Sheller describes how the materiality and meaning of aluminum transformed modern life and continues to shape the world today. Aluminum, Sheller tells us, changed mobility and mobilized modern

life. It enabled air power, the space age and moon landings. Yet, as Sheller makes clear, aluminum was important not only in twentieth-century technology, innovation, architecture, and design but also in underpinning global military power, uneven development, and crucial environmental and health concerns. Sheller describes aluminum's shiny utopia but also its dark side. The unintended consequences of aluminum's widespread use include struggles for sovereignty and resource control in Africa, India, and the Caribbean; the unleashing of multinational corporations; and the pollution of the earth through mining and smelting (and the battle to save it). Using a single material as an entry point to understanding a global history of modernization and its implications for the future, *Aluminum Dreams* forces us to ask: How do we assemble the material culture of modernity and what are its environmental consequences? *Aluminum Dreams* includes a generous selection of striking images of iconic aluminum designs, many in color, drawn from advertisements by Alcoa, Bohn, Kaiser, and other major corporations, pamphlets, films, and exhibitions.

Culture and the City Nov 30 2019 This edited collection will examine the way in which cities are imagined, experienced and shaped by those who reside within them, those who manage or govern them, and those who, as visitor, tourist or traveller, pass through them. Attention will be paid to the influence that these various inhabitants have on city life and living and the dialectic that exists between their sometimes collective and sometimes divergent, perceptions and uses of city space. In conjunction with this, the collection will explore the ways in which local culture and cultural policy are used by public and private interests as the framework for changing the image and amenity of the city in order to raise its profile and attract tourists. The book contributes to discussions of the increasingly high profile place that cultural programs have in urban regeneration initiatives and explore the tensions, conflicts and negotiations that emerge in urban spaces as a result of policy and culture coming together. Papers will be sought from researchers around the world with a view to examining the nexus between tourism, leisure and cultural programming from a number of perspectives and with reference to a range of international case studies. This book was published as a special issue of the *Journal of Policy Research in Tourism, Leisure and Events*.

An Ecosystem Approach to Sustainable Agriculture Jan 01 2020 Modern industrial agriculture is not sustainable because of its heavy reliance on petroleum, a non-renewable source of the energy used in farming, and because of pollution caused by petroleum products such as fertilizers and pesticides. A systems analysis of farming suggests that agriculture will be more sustainable when services of nature, such as nutrient recycling by soil micro-organisms and natural controls of insects, replace the services now provided by energy from petroleum. Examples are drawn from the Southeastern USA, but lessons learned can be applied worldwide.

Rural Change in Australia Jul 07 2020 New twenty-first century economic, social and environmental changes have challenged and reshaped rural Australia. They range from ageing populations, youth out-migration, immigration policies (that seek to place skilled migrants in rural Australia), tree changers, agricultural restructuring and new relationships with indigenous populations. Challenges also exist around the 'patchwork economy' and the wealth that the mining boom offers some areas, while threatening regional economic decline in others. Rural Australia is increasingly not simply a place of production of agriculture and minerals but an idea that individuals seek and are encouraged to consume. The socio-economic implications of drought, water rights and changing farming practices, have prefaced new social, cultural and economic reforms. This book provides a contemporary perspective on rapidly evolving population, economic and environmental changes in 'rural and regional Australia', itself a significant concept. Bringing together a range of empirical studies, the book builds on established rural studies themes such as population change, economic restructuring and globalisation in agriculture but links such changes to

environmental change, culture, class, gender, and ethnic diversity. Presenting original and in-depth interventions on these issues and their intersections, this book assembles the best of contemporary research on rural Australia.

Burned Bridge Aug 08 2020 The building of the Berlin Wall in 1961 shocked the world. Ever since, the image of this impenetrable barrier between East and West, imposed by communism, has been a central symbol of the Cold War. Based on vast research in untapped archival, oral, and private sources, *Burned Bridge* reveals the hidden origins of the Iron Curtain, presenting it in a startling new light. Historian Edith Sheffer's unprecedented, in-depth account focuses on *Burned Bridge*-the intersection between two sister cities, Sonneberg and Neustadt bei Coburg, Germany's largest divided population outside Berlin. Sheffer demonstrates that as Soviet and American forces occupied each city after the Second World War, townspeople who historically had much in common quickly formed opposing interests and identities. The border walled off irreconcilable realities: the differences of freedom and captivity, rich and poor, peace and bloodshed, and past and present. Sheffer describes how smuggling, kidnapping, rape, and killing in the early postwar years led citizens to demand greater border control on both sides--long before East Germany fortified its 1,393 kilometer border with West Germany. It was in fact the American military that built the first barriers at *Burned Bridge*, which preceded East Germany's borderland crackdown by many years. Indeed, Sheffer shows that the physical border between East and West was not simply imposed by Cold War superpowers, but was in some part an improvised outgrowth of an anxious postwar society. Ultimately, a wall of the mind shaped the wall on the ground. East and West Germans became part of, and helped perpetuate, the barriers that divided them. From the end of World War II through two decades of reunification, Sheffer traces divisions at *Burned Bridge* with sharp insight and compassion, presenting a stunning portrait of the Cold War on a human scale.

The International Handbook on Aging Jul 19 2021 The United Nations World Assembly on Aging has made advancing health and well-being into old age a worldwide call for action. And this text at hand shows us what researchers worldwide are doing to answer that call. Here, three of America's most esteemed experts on aging lead a global team of contributors - each an expert in his or her country - to show us what the top challenges of each nation are, and what top research is being done there to meet those. While we cannot predict with absolute certainty all of the issues that will arise over the next 20 years, we can anticipate some and we must start now to prepare for these challenges, an expert from the U.S. Department of Health and Human Services warned at a recent UN World Assembly on Aging. Needed response to the global population shift is not just the responsibility of governments, but will be a product of wise, long-term decisions made by individuals and societies, she explained. In most nations globally, populations are graying and the number of people aged 65 and older is vastly increasing, creating a larger segment of senior citizens than the world has ever before seen. Across human history, the elderly accounted for no more than 3 percent of the world population. By the year 2030, the elderly are expected to make up about 25 percent of the world population. And while longevity is of course seen as a great success, longer lifespan for such masses also creates dilemmas. For example, the incidence of dementia has already increased significantly with an 11-fold increase in people aged 65 and older in the US since the turn of the century, and a similar increase in aged people in Scotland has researchers there scrambling to find treatments for what they expect will be a 75 percent increase in dementia over the next 25 years. Chronic diseases that come with aging are already taxing health care systems in the US and around the world to Japan, with most experts aware their current health systems would be overrun and lack enough staff and facilities to handle the needs of an elderly population multiplying largely in the coming two decades. Increases in psychological issues such as dealing with the depression often striking aged people are impending, too, as are social issues such as how families, and public policies, will deal with the changing shape of the family.
