Lab Reports and Projects in Sport and Exercise Science Jun 08 2020 Most science degrees will have a practical or laboratory-based component which will require some sort of final report, whether this be a conventional laboratory report or a final-year dissertation. All of these formats require students to be able to analyse their data in an appropriate way and subsequently convey their key thoughts and information to a third party. Therefore, writing laboratory reports is an essential part any science degree. This new revised edition sees the expansion of statistical examples including initial data checks and assumptions, increased awareness of critical appraisal tools and resources, project planning and a range of 'Challenge yourself' activities to supplement understanding and provides a comprehensive overview of what should be contained within each section of a scientific report, and clearly explains how it should be presented. Written in a friendly and engaging style, it guides the reader through abstracts, literature reviews, methodology, reporting discussions and referencing and contains a wealth of examples and practical advice on how to improve and refine your own writing. From writing a first lab report to preparing a final-year dissertation or postgraduate thesis, sports and exercise science students at all levels will find this book a valuable resource in developing both skill and confidence in scientific communication. Key features include: The layout of the book is designed to reflect that of a typical scientific report to help students plan their own projects. Each chapter includes numerous examples, exercises and activities to engage students and develop skills in each aspect of report writing. The book includes discussion of critical appraisal techniques to help students refine their research questions. All data sets and illustrations used are drawn from the key disciplines in sport and exercise science, including physiology, psychology and biomechanics.

Mechanics of Materials Laboratory Course Jul 22 2021 This book is designed to provide lecture notes (theory) and experimental design of major concepts typically taught in most Mechanics of Materials courses in a sophomore- or junior-level Mechanical or Civil Engineering curriculum. Several essential concepts that engineers encounter in practice, such as statistical data treatment, uncertainty analysis, and Monte Carlo simulations, are incorporated into the experiments where applicable, and will become integral to each laboratory assignment. Use of common strain (stress) measurement techniques, such as strain gages, are emphasized. Application of basic electrical circuits, such as Wheatstone bridge for strain measurement, and use of load cells, accelerometers, etc., are employed in experiments. Stress analysis under commonly applied loads such as axial loading (compression and tension), shear loading, flexural loading (cantilever and four-point bending), impact loading, adhesive strength, creep, etc., are covered. LabVIEW software with relevant data acquisition (DAQ) system is used for all experiments. Two final projects each spanning 2-3 weeks are included: (i) flexural loading with stress intensity factor determination and (ii) dynamic stress wave propagation in a slender rod and determination of the stress-strain curves at high strain rates. The book provides theoretical concepts that are pertinent to each laboratory experiment and prelab assignment that a student should complete to prepare for the laboratory. Instructions for securing off-the-shelf components to design each experiment and their assembly (with figures) are provided. Calibration procedure is emphasized whenever students assemble components or design experiments. Detailed instructions for conducting experiments and table format for data gathering are provided. Each lab assignment has a set of questions to be answered upon completion of experiment and data analysis. Lecture notes provide detailed instructions on how to use LabVIEW software for data gathering during the experiment and conduct data analysis.

Exercise Testing and Prescription Lab Manual Jun 20 2021 With a focus on foundational information, the Exercise Testing and Prescription Lab Manual, Second Edition, offers practical application of knowledge and skills associated with standardized health- and fitness-related tests. Progressing through 14 easy-to-follow experiential-based learning labs, readers will gain the skills and techniques required for successful completion of the ACSM Certified Health Fitness Specialist certification (CHFS). The improved second edition includes the latest updates consistent with the recent modifications published within the ACSM's Guidelines for Exercise Testing and Prescription, Eighth Edition. In this new edition, readers will also find the following features: •In-depth content regarding functional parameters related to exercise, especially in regard to heart rate and blood pressure •Additional information on body composition testing focusing on improved knowledge and skills related to assessment of skinfolds and circumferences •New emphasis on the importance of assessment and how assessment relates to overall program development •An updated format that flows progressively through testing and prescription •Enhanced discussion questions within each lab, which incorporate more in-depth analysis of the information being covered Though most closely matched with ACSM CHFS certification guidelines, Exercise Testing and Prescription Lab Manual, Second Edition, is also useful for individuals preparing for certification within other training organizations or as a resource for the ACSM Certified Personal Trainer certification. The progression of labs through the testing and prescription process, easy-to-follow instructions, and forms and worksheets also make this lab manual an excellent experiential component for a course in exercise testing and prescription. Exercise Testing and Prescription Lab Manual, Second Edition, is organized into three sections covering pretest responsibilities, exercise testing techniques, and exercise prescription. Readers will learn safety procedures and requirements for exercise testing equipment, follow step-by-step instructions for calibration of laboratory instruments, and learn guidelines for medical history evaluation, risk factor evaluation and stratification, and informed consent. Next, the application of techniques used in assessing the components of health-related fitness is presented. Within the exercise prescription section, readers learn about the calculation of metabolic work, the three phases of exercise prescription, assessment of participants' goals, and gaining participants' commitment to the exercise prescription. A final comprehensive lab challenges readers to apply techniques and principles in developing various case studies. Each lab features the same easy-to-follow format outlining the purpose of the lab, materials required, background information, procedures, discussion questions, and references. Detailed appendixes contain a summary of the effects of common pharmacological agents on cardiorespiratory responses at rest, common metric conversions used in exercise testing and prescription calculations, a list of metabolic and anthropometric formulas, and answers to lab questions. The appendixes also contain all forms and worksheets required for collecting data and completing the lab assignments. The second edition of the Exercise Testing and Prescription Lab Manual provides focused, step-by-step preparation for those studying for the ACSM CHFS certification. With its reorganized format, up-to-date information, and forms and worksheets, this text is also a valuable best-practices reference for health and fitness specialists certified by the ACSM and other organizations.
