Asthma and Rhinitis Aug 10 2020 The second edition of this highly acclaimed text has been extensively revised and greatly expanded to reflect the considerable advances made in our understanding of the mechanisms of asthma and rhinitis. Containing the contributions of 242 experts of international standing, presented in 133 chapters, Asthma and Rhinitis provides an up-to-date, authoritative reference for both the clinician and scientist. The global approach given in this book mirrors the universal approach to the understanding of allergic disease. The editors have carried out a thorough and radical revision of the content by adding 6 new sections and 44 new chapters. Most of this expansion is due to greatly increased coverage of the clinical aspects of asthma, with new sections on childhood asthma and on drug treatment (each drug class has its own chapter). Also, the expansion of research into the genetic basis of asthma has necessitated a whole new section on Genetics, comprising some six chapters. There are also new chapters on adult-onset asthma and the relationship of asthma to sinusitis. A new section on Asthma in Special Circumstances includes chapters on asthma in pregnancy, asthma and surgery, asthma in the elderly and asthma in the context of critical care. In bringing the Second Edition fully up to date, the book has inevitably increased in size, and is now presented in two volumes. The second edition of Asthma and Rhinitis will continue the tradition of its predecessor of providing an up-to-the-minute reference for all those involved in the management of, and research into, asthma and rhinitis.

Immunotherapy in Asthma Jan 03 2020 This massive reference thoroughly analyzes the mechanisms implicated in the pathophysiology of asthma, such as T helper lymphocyte subsets, and the consequences of various

extrinsic and intrinsic factors, and IgE receptor expression-reviewing current concepts in immunotherapeutic approaches for the treatment of this and other allergic diseases. Investigates the only category of treatment showing the potential to affect the natural course of allergic diseases and prevent the onset of asthma. Written by more than 80 internationally renowned pulmonary experts, allergic disease specialists, and basic researchers, Immunotherapy in Asthma discusses the efficacy of new medications examines the role of metachromatic cells, lymphocytes, macrophages, and other cell types present in bronchial biopsies presents basic topics such as the functional and phenotypic properties of Th1 and Th2 cells and their role in allergic disease and the regulation of IgE-mediated inflammatory responses addresses the deleterious effects of smoking and passive exposure to cigarette smoke in children and adults assesses differences and similarities between intrinsic and antigen-induced asthma describes the effects of immunogenic peptides on the cytokine production profile of allergen-specific CD4+ T cells explains the different clinical aspects of allergic responses, such as bronchial hyperreactivity and eosinophilic inflammation of the airways reviews the genetic basis of allergy, as well as risk factors for asthma explores oral, sublingual, local nasal, and local bronchial routes for noninjective immunotherapies evaluates various agents with modulatory effects on normal and pathogenic immune responses focuses on strategies for the prevention of childhood asthma and more! Containing over 3000 references, drawings, and tables, Immunotherapy in Asthma is an indispensable resource for pulmonologists, immunologists, allergists, and medical school students in these disciplines.

Pesticide Risk in Groundwater Aug 02 2022 Pesticide pollution of groundwater results from agricultural practices, the properties of the substance and its behavior in the soil environment, and the characteristics of aquifers and their vulnerability. Pesticide Risk in Groundwater provides an overview of the main issues concerning pesticide pollution of groundwater worldwide. The book is divided into five sections. Section I reviews experimental data of groundwater monitoring to indicate the extent of the problem on a global basis. Based on this evaluation, herbicides are examined in depth. Section II describes predictive approaches to estimate the distribution and fate of pesticides, and includes a chapter devoted to hydrogeological aspects affecting the vulnerability of aquifers. The third section evaluates pesticides in relation to their toxicology. It critically examines the criteria and procedures by the World Health Organization (WHO) and the U.S. Environmental Protection Agency (EPA) to define quality objectives, and compares the monitoring data on pesticides in groundwater with their quality objectives. Section IV evaluates various strategies to control and prevent groundwater pollution problems. Different water treatment options are described from a technical and economic point of view. The main preventative actions include the chemical approach, the agronomic approach, and the land use approach. The final section reviews the state of the art of drinking water regulations in the EEC, the United States, and other OECD countries. The author describes the economic implications of groundwater pollution and its control and exemplifies with a real case study.

Environmental Alteration Leads to Human Disease Sep 22 2021 This book aims to explore the impact of human alterations of Earth's ecological systems on human health. Human activities are producing fundamental biophysical changes faster than ever before in the history of our species, which are accompanied by dangerous health effects. Drawing on advanced ecological principles, the book demonstrates the importance of using systemic medicine to study the effects of ecological alterations on human health. Planetary Health is an interdisciplinary field, but first of all it must be systemic and it needs a preferential relationship between Ecology and Medicine. This relation is to be upgrading, because today both ecology and medicine pursue few systemic characters and few correct interrelations. We need to refer to new principles and methods sustained by the most advanced fields, as Landscape Bionomics and Systemic Medicine. Thus, we will be able to better discover environmental syndromes and their consequences on human health. Environmental transformations proposed by PHA (from biodiversity shifts to climate change) do not consider bionomic dysfunctions which can menace human health. On the contrary, finding advanced diagnostic criteria in landscape syndromes can strongly help to find the effects on human well-being. The passage from sick care to health care can't avoid the mentioned upgrading.

Bioregional Planning and Design: Volume II Mar 29 2022 This book provides insights and discusses the practical application of the theoretical concept of urban bioregion complementing the general bio-regional planning cross-disciplinary issues provided in Volume I. It examines planning practices, such as relocalisation of energy flows, land protection for climate change, territorial heritage enhancement, the consideration of urban ecosystems and agro-ecology. It presents discussions on regional contexts, practices and projects for a bioregional recovery, and includes case studies from France, Belgium, Spain, Greece, Austria and Italy, discussing topics that range from the reframing of local energy production/delivery planning systems to soil protection and farmland sustainable exploitation schemes. This volume concludes with three cross-European case studies that make clear the worldwide relevance and potential of bioregional approach beyond the Global North or Western countries.

Grassland use in Europe Mar 17 2021 Covering 40% of the European agricultural area, grasslands are vitally important both for agriculture and society. These grasslands serve multiple functions, including the local provision of fodder for animal husbandry (and hence high-quality food provision for people), biodiversity conservation, carbon storage and the provision of 'traditional' landscapes that European citizens appreciate for recreational purposes and cultural heritage. The future of grassland farming in Europe is in the hands of young farmers. Compared to other topics, grassland management has often been a weak point of teaching delivered by agricultural technical schools in several European countries. The training of future farmers and advisors could thus be significantly improved, which could lead to better grassland management in the medium and long terms. For this reason, the European project Inno4Grass created a syllabus and a set of PowerPoint presentations on practical grassland management for current and future generations of grassland farmers and advisors.

Ornamental Grasses Nov 05 2022 Wolfgang Oehme is one of the most important garden designers of the last 30 years. In partnership with James Van Sweden, who contributes an essay to this book, he ushered in the revolutionary garden style known as the New American Garden. Eschewing previous conventions such as vast lawns, clipped shrubs, and dreary beds of annuals, the New American garden embodies the simple beauty and grandeur of the prairie, defining itself with large sweeps of herbaceous perennials and grasses. The feeling of sheer beauty and calmness that pervades Oehme's gardens is a reminder of our connection to nature. *Ornamental Grasses* chronicles Oehme's professional journey, from his childhood in war-torn Germany to his immense success in the United States, all the while exploring his remarkable career, both solo and in partnership with Van Sweden. Over 200 gorgeous photographs depict dreamlike gardens, "Wolfi" plants, people, and much more.
