The Group Effect Jul 07 2020 Sociologists and anthropologists have had a long interest in studying the ways in which cultures shaped different patterns of health, disease, and mortality. Social scientists have documented low rates of chronic disease and disability in non-Western societies and have suggested that social stability, cultural homogeneity and social cohesion may play a part in explaining these low rates. On the other hand, in studies of Western societies, social scientists have found that disease and mortality assume different patterns among various ethnic, cultural and social-economic groups. The role of stress, social change and a low degree of cohesion have been suggested, along with other factors as contributing to the variable rates among different social groups. Social cohesion has been implicated in the cause and recovery from both physical and psychological illnesses. Although there has been a large amount of work established the beneficial effects of cohesion on health and well-being, relatively little work has focused on HOW increased social cohesion sustains or improves health. This work is based on the premise that there are risk factors, including social cohesion that regulate health and disease in groups. One of the challenges is how to measure social cohesion – it can be readily observed and experienced but difficult to quantify. A better understanding of how social cohesion works will be valuable to improving group-level interventions.

Morphing Intelligence Jul 31 2022 What is intelligence? The concept crosses and blurs the boundaries between natural and artificial, bridging the human brain and the cybernetic world of AI. In this book, the acclaimed philosopher Catherine Malabou ventures a new approach that emphasizes the intertwined, networked relationships among the biological, the technological, and the symbolic. Malabou traces the modern metamorphoses of intelligence, seeking to understand how neurobiological and neurotechnological advances have transformed our view. She considers three crucial developments: the notion of intelligence as an empirical, genetically based quality measurable by standardized tests; the shift to the epigenetic

paradigm, with its emphasis on neural plasticity; and the dawn of artificial intelligence, with its potential to simulate, replicate, and ultimately surpass the workings of the brain. Malabou concludes that a dialogue between human and cybernetic intelligence offers the best if not the only means to build a democratic future. A strikingly original exploration of our changing notions of intelligence and the human and their far-reaching philosophical and political implications, *Morphing Intelligence* is an essential analysis of the porous border between symbolic and biological life at a time when once-clear distinctions between mind and machine have become uncertain.

The Anthropocene and the Humanities Sep 28 2019 A wide-ranging and original introduction to the Anthropocene (the Age of Humanity) that offers fresh, theoretical insights bridging the sciences and the humanities From noted environmental historian Carolyn Merchant, this book focuses on the original concept of the Anthropocene first proposed by Paul Crutzen and Eugene Stoermer in their foundational 2000 paper. It undertakes a broad investigation into the ways in which science, technology, and the humanities can create a new and compelling awareness of human impacts on the environment. Using history, art, literature, religion, philosophy, ethics, and justice as the focal points, Merchant traces key figures and developments in the humanities throughout the Anthropocene era and explores how these disciplines might influence sustainability in the next century. Wide-ranging and accessible, this book from an eminent scholar in environmental history and philosophy argues for replacing the Age of the Anthropocene with a new Age of Sustainability.

The Emotionally Strong Leader Oct 10 2020 The Emotionally Strong Leader offers those leading our workplaces, organizations, and institutions an opportunity to transform their leadership and their lives by learning to harness the power contained in recognizing and understanding their feelings. For leaders, managing their emotions and leading with a strong mind and a kind heart while using a set of clear, simple, and tested skills and strategies will enable them to connect more authentically and communicate more effectively with their colleagues and teams. This kind of connection and communication creates an environment of trust and belonging that will spur engagement, spike curiosity, and engender fraternity in the workplace. How does one get there? By leading with emotional intelligence. Unfortunately, too many leaders choose another path; one that eschews their emotions and those of their employees as bothersome and unimportant to the task at hand. This limited and damaging viewpoint tends to make people feel as though they are simply task-managing machines and not the terrific and complex individuals full of energy, passion, and unlimited potential that they are. What we need are leaders who understand themselves from the inside out, who know why they do what they do, and who use the information their feelings provide to help them make informed, rational decisions--especially when the stakes are high. We need leaders who express humility, engage in genuine and caring conversations with the people they lead, and who aren't afraid to admit when they make a mistake. We need executives who are both emotional and strong. Author Carolyn Stern's six-step self-coaching model--adapted from emotional intelligence courses she's developed for major universities and corporations across North America--is backed by decades of field experience and top science on emotions and behavior. Stern's model is the tool leaders need to uncover their barriers to growth and change, set personal goals, and tap into their motivation. It will give them the means and drive to manage the hurdles life throws at them, dramatically impacting their performance, results, and happiness. Simply put, *The Emotionally Strong Leader* will turn the way readers think about leading on its head.

The Last CaveBear III At War Dec 24 2021 This book is a fictionalized, but not entirely, attempt to chronicle our time, much the same way that *Tale of Two Cities*, and *War and Peace* chronicled the time of the French Revolution and its aftermath. I believe that there are three phases to any revolution, I. The events that divide the population by class and institutionalize the classes, II. The revolution, and III. The chaos of building a new social structure. We are in a Phase I right now. This book, and the other three in this series may not match the literary achievement of Dickens and Tolstoy, but they may give the reader more insight into what is happening in our time. What happens next depends on what we have learned from the past, but will probably follow a pattern that is beyond the control of any one person, or any group of people.

Morphing Intelligence Apr 27 2022 Acclaimed philosopher Catherine Malabou traces the modern metamorphoses of intelligence, seeking to understand how neurobiological and neurotechnological advances have transformed our present-day view. She emphasizes the intertwined, networked relationships among the biological, the technological, and the symbolic.

Fundamentals of Gifted Education Jan 31 2020 The field of gifted education is characterized by a confusing array of perspectives concerning such fundamental issues as definition, philosophy, curriculum, social and emotional development, and underserved populations. The mission of this book is to provide a coherent framework that instructors and service providers can use in planning effective programs, providing appropriate counseling services, and evaluating programs for the gifted. Most sections are organized around fundamental issues confronting the field and follow a common structure: an introductory chapter that provides historical and theoretical background and organizing questions followed by several point-of-view chapters written by experts that provide varied perspectives on the topic at hand.

Distinguishing Features
Comprehensive Coverage - The book's forty-five manageable-length chapters cover the full range of topics that must be considered in planning programs and services for gifted students both within and outside of school.
Coherent Structure - Section introductions provide background information and organizing questions to guide chapter authors who provide varying views of the issue at hand. The emphasis is not on the "right way" or the "wrong way" (except when clearly documented bad practice is discussed), but on how best practice stems from well-informed and logical decision-making.
Decision Making Focus - The book's introductory chapter addresses the need for a clearly developed and consistently applied set of values to guide decision making. Likewise, each section introduction includes a decision making framework regarding some aspect of educating, counseling, or parenting gifted students. This book is appropriate for introductory level courses in gifted education or courses in program development and planning. It is also suitable for school personnel responsible for making program planning decisions in the area of gifted education and for academic libraries with holdings in this area.

Perfect-Q can practice his magic tricks and Angela can read her spy novels. What can go wrong? As Q and Angela settle into their new life and new relationship as siblings, they start to notice that certain coincidences don't seem coincidental. For example, how does a band roadie named Boone find them in the middle of a desert where their coach just happens to break down? Why does a man from their parents' wedding keep showing up in the same cities they stop at? When they reach Philadelphia, Q and Angela realize this tour is definitely not the trip their parents had planned and that the "City of Brotherly Love" is full of mysteries and secrets that could threaten their new life together. Ungifted Aug 08 2020 Child prodigies. Gifted and Talented Programs. Perfect 2400s on the SAT. Sometimes it feels like the world is conspiring to make the rest of us feel inadequate. Those children tapped as possessing special abilities will go on to achieve great things, while the rest of us have little chance of realizing our dreams. Right? In *Ungifted*, cognitive psychologist Scott Barry Kaufman -- who was relegated to special education as a child -- sets out to show that the way we interpret traditional metrics of intelligence is misguided. Kaufman explores the latest research in genetics and neuroscience, as well as evolutionary, developmental, social, positive, and cognitive psychology, to challenge the conventional wisdom about the childhood predictors of adult success. He reveals that there are many paths to greatness, and argues for a more holistic approach to achievement that takes into account each young person's personal goals, individual psychology, and developmental trajectory. In so doing, he increases our appreciation for the intelligence and diverse strengths of prodigies, savants, and late bloomers, as well as those with dyslexia, autism, schizophrenia, and ADHD. Combining original research, anecdotes, and a singular compassion, *Ungifted* proves that anyone -- even those without readily observable gifts at any single moment in time -- can become great.
