Three Contributions to the Theory of Sex Sep 20 2019 The fact of sexual need in man and animal is expressed in biology by the assumption of a "sexual impulse." This impulse is made analogous to the impulse of taking nourishment, and to hunger. The sexual expression corresponding to hunger not being found colloquially, science uses the expression "libido." Popular conception makes definite assumptions concerning the nature and qualities of this sexual impulse. It is supposed to be absent during childhood and to commence about the time of and in connection with the maturing process of puberty; it is supposed that it manifests itself in irresistible attractions exerted by one sex upon the other, and that its aim is sexual union or at least such actions as would lead to union. But we have every reason to see in these assumptions a very untrustworthy picture of reality. On closer examination they are found to abound in errors, inaccuracies and hasty conclusions. If we introduce two terms and call the person from whom the sexual attraction emanates the sexual object, and the action towards which the impulse strives the sexual aim, then the scientifically examined experience shows us many deviations in reference to both sexual object and sexual aim, the relations of which to the accepted standard require thorough investigation.

[Skilled Interpersonal Communication](#) Oct 02 2020 There is a fundamental, powerful, and universal desire amongst humans to interact with others. People have a deep-seated need to communicate, and the greater their ability in this regard the more satisfying and rewarding their lives will be. The contribution of skilled interpersonal communication to success in both personal and professional contexts is now widely recognised and extensively researched. As such, knowledge of various types of skills, and of their effects in social interaction, is crucial for effective interpersonal functioning. Previous editions have established *Skilled Interpersonal Communication* as the foremost textbook on communication. This thoroughly revised and expanded 5th edition builds on this success to provide a comprehensive and up-to-date review of the current research, theory and practice in this burgeoning field of study. The first two chapters introduce the reader to the nature of skilled interpersonal communication and review the main theoretical perspectives. Subsequent chapters provide detailed accounts of the fourteen main skill areas, namely: nonverbal communication; reinforcement; questioning; reflecting; listening; explaining; self-disclosure; set induction; closure; assertiveness; influencing; negotiating; and interacting in, and leading, group discussions. Written by one of the foremost international experts in the field and founded solidly in research, this book provides a key reference for the

study of interpersonal communication. This theoretically informed, yet practically oriented text will be of interest both to students of interpersonal communication in general, and to qualified personnel and trainees in many fields.
