Citizenship, Nationalism and Refugeehood of Rohingyas in Southern Asia Dec 12 2020 This book provides an in-depth investigation of citizenship and nationalism in connection with the Rohingya community. It analyses the processes of production of statelessness in South Asia in general, and with regard to the Rohingyas in particular. Following the persecution of the Rohingya community in Myanmar (Burma) by the military and the Buddhist militia, a host of texts, mostly descriptive, have examined the historical, political and cultural roots of the genocidal massacre and the flight of its victims to South Asia and South-East Asian countries. The UNHCR reports describe the plight of Rohingyas during and after their journey, while other works focus on the political-economic roots of this ethnic conflict and its consequences for the Rohingyas. To date, very few theoretical insights have been provided on the Rohingya issue. This book seeks to fill that gap, and explores a dialogue between the state and its citizens and non-citizens that results in the production of statelessness. In theoretical terms, the book addresses the construction of citizens and non-citizens on the part of the state, and the process of symbolic othering, achieved through various state practices couched in terms of nationalism. Extensive case studies from India, Myanmar and Bangladesh provide the foundation for a robust theoretical argument. Given its scope, the book will be of interest to students, academics and researchers with a focus on political economy in South Asia in general and/or refugee studies in particular.

Groundwater Intensive Use Mar 03 2020 Intensive use of groundwater has resolved the demand for drinking water and, through irrigation, has contributed to the eradication of malnourishment in many developing countries. The spectacular worldwide increase in groundwater use in the last decades, especially in arid and semi-arid regions, has been a silent revolution carried out by millions of small farmers. In some instances, groundwater abstraction has caused problems of quality degradation, excessive drawdown of groundwater levels, land subsidence, reduction of spring and baseflows or degradation of groundwater-dependent ecosystems. Most of these problems could be anticipated, mitigated, or even avoided with more active water agencies, adequate regulations and users' participation in management. *Groundwater Intensive Use* contains a selection of papers presented at a symposium held in December 2002 in Valencia, Spain. It constitutes a step forward in creating a greater worldwide awareness of the relevance of groundwater in water resources policy. The book presents new ideas and accounts of recent advances in technical, economic, legal, administrative and political issues. It addresses groundwater development to ecosystems sustainability, through different or complementary approaches. A wide series of case studies from North and South America, Europe, South Asia and North and Sub-Saharan Africa cover the various issues. These case studies represent countries with a wide diversity of social circumstances, from areas in which development is emerging, to communities with a long history of successful groundwater use.
