HRT-HOODTM: A Structured Design Method for Hard Real-Time Ada Systems Aug 27 2019 The increasing use of computers for real-time control on board spacecrafts has brought with it a greater emphasis on the development methodology used for such systems. By their nature, spacecraft control computers have to operate unattended for long periods and because of the programmatic of space, systems are subject to a long development cycle. As a result, there are two distinct concerns, the first being that the development approach guarantees functional and timing correctness, the second being that problems, particularly those associated with timing, are considered as early as possible in the spacecraft development life cycle. The European Space Agency has, for a number of years, encouraged the development of software using HOOD. It was thus a natural next step to investigate the incorporation of time within the existing HOOD framework. This has proven to be very beneficial and this book describes the approach developed by the authors for handling Hard Real-Time applications. It describes both the background scheduling theory, provides practical examples of its application to real life problems, and demonstrates how it is used in the various phases of the development of Hard Real-Time systems.

The ACE Programmer's Guide Dec 24 2021 This book analyzes the application of the legal principle of non-discrimination in the context of energy network operation. Since the early 1990s, the duty not to discriminate has applied to energy network operators, in order to achieve a liberalized European energy market in which European consumers have a free and real choice of energy supplier. The book provides guidance to those working in the context of the non-discrimination obligation, such as energy network operators, regulatory authorities, national courts, and other energy market players, as well as those studying the rules for (academic) research purposes. The book's conclusions serve as a tool for critical consideration and offer suggestions for improvements to the legal framework and its application on a European, as well as a national, level. Several questions are answered, including why energy network operators have a non-discrimination obligation in the context of energy market liberalization, how European law has tried to remove and control the discrimination problem since the early 1990s, and when different treatment of energy network users amounts to 'forbidden' discrimination. The book's conclusions are underpinned by comparisons with competition law, public procurement law, and telecommunications law, as well as a case study on how energy network operators and regulators in several Member States currently interpret and apply the non-discrimination obligation. Intentional Responsive Adult Practices: Supporting Kids to Not Only Overcome Adversity but to Thrive Feb 11 2021 This book draws on positive psychology as well as strengths-based and solution-focused practices to empower adults to help children instead of reacting to their behavior. Erik K. Laursen, PhD, who has spent his career helping high-risk children and their families, identifies ten intentional responsive adult practices to give children the tools they need to overcome adversity. Learn how to: support young people to grow and develop throughout childhood, adolescence, into young adulthood; provide supportive relationships where children and young people thrive; and help children overcome social and emotional problems that are significant barriers to well-being. While numerous books, articles, and courses focus on the long-term effects of childhood trauma, this knowledge alone does not give us the tools we need to help children thrive. By learning how to reflect and intentionally respond to children's pain, which is the focus of this book, you'll be able to help young people transform their lives.

International IDEA Handbook on Democracy Assessment May 05 2020 The International IDEA Handbook on Democracy Assessment is a robust and sensitive guide to assessing the quality of democracy and human rights in any country around the world. The Handbook introduces an easy-to-use and universal methodology for assessing the condition of democracy in any country, or its progress in democratisation, that has been developed in a three-year action programme at IDEA, the inter-governmental Institute for Democracy and Electoral Assistance in Sweden. The Handbook provides a means to measure systematically the full range of values, institutions and issues relating to modern democracy that is sensitive to the underlying principles and democracy and the differences between democracies themselves. It is therefore both universal in application and capable of responding to particular aspects of any one nation's democratic arrangements. The animating principle of the Handbook is that only citizens of a nation themselves are qualified to assess the quality of their own democratic arrangements. Thus, it provides a self-help guide, which gives academics, lawyers, political practitioners, journalists and interested citizens the tools to assess the state of their democracy, or any key aspects of their democracy. The Handbook is above all a practical working document that draws on the actual experience of assessing democracy in different countries, comparative knowledge and research, and democratic principles and practice. It gives a step-by-step guide to the purposes and methods of democracy assessment; who to involve; how to use the research tools; how to validate the findings; what standards of practice to adopt; and how to present and publicise a finished assessment. It contains extracts from completed assessments, guidance on the use of qualitative and quantitative data, examples of codes of democratic practice and international and regional standards, and a vast list of accessible data sources. The methodology was created by a team of political scientists assembled from all regions of the world by International IDEA and has been tried and tested in a variety of countries, including Bangladesh, El Salvador, Italy, Kenya, Malawi, New Zealand, Peru, South Korea and the United Kingdom. International organisations like the World Bank and UNECA are adapting it for in-country use. The four main authors and editors have been directly involved from the inception of the project - in developing and refining the methodology and participating in and advising on the nine country studies that form the essential practical core of experience on which this invaluable Handbook is based.
