Developing Multi-Agent Systems with JADE Jun 05 2020 Learn how to employ JADE to build multi-agent systems! JADE (Java Agent DEvelopment framework) is a middleware for the development of applications, both in the mobile and fixed environment, based on the Peer-to-Peer intelligent autonomous agent approach. JADE enables developers to implement and deploy multi-agent systems, including agents running on wireless networks and limited-resource devices. Developing Multi-Agent Systems with JADE is a practical guide to using JADE. The text will give an introduction to agent technologies and the JADE Platform, before proceeding to give a comprehensive guide to programming with JADE. Basic features such as creating agents, agent tasks, agent communication, agent discovery and GUIs are covered, as well as more advanced features including ontologies and content languages, complex behaviours, interaction protocols, agent mobility, and the in-process interface. Issues such as JADE internals, running JADE agents on mobile devices, deploying a fault tolerant JADE platform, and main add-ons are also covered in depth. Developing Multi-Agent Systems with JADE: Comprehensive guide to using JADE to build multi-agent systems and agent orientated programming. Describes and explains ontologies and content language, interaction protocols and complex behaviour. Includes material on persistence, security and a semantics framework. Contains numerous examples, problems, and illustrations to enhance learning. Presents a case study demonstrating the use of JADE in practice. Offers an accompanying website with additional learning resources such as sample code, exercises and PPT-slides. This invaluable resource will provide multi-agent systems practitioners, programmers working in the software industry with an interest on multi-agent systems as well as final year undergraduate and postgraduate students in CS and advanced networking and telecoms courses with a comprehensive guide to using JADE to employ multi agent systems. With contributions from experts in JADE and multi agent technology.

Helping Process: Assessment to Termination Jul 19 2021 Integrating a unique conceptual- and skills-based approach, HELPING PROCESS: ASSESSMENT TO TERMINATION presents the methodology of the helping process as it is practiced in the human service field. The strong applied approach of this worktext includes an innovative content chapter/skill chapter format. Skills/techniques are introduced in an overview chapter, which is followed by a chapter that provides case examples and worksheets enabling students to put what they learn into practice. Five chapters focus on the application of skills necessary for assessing, intake interviewing, planning, building a case file, implementing, and terminating work with clients. HELPING PROCESS is thoroughly grounded in strength-based helping. Featuring a multicultural emphasis throughout, it details the helping process using quotes, in-depth case studies, vignettes, and examples from front-line service providers such as counselors, case managers, and social workers to illustrate and reinforce key concepts. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Social Work and Health Care in an Aging Society Jan 13 2021 This book places significant issues related to the health, mental health, and well-being of older adults and their caregivers within the context of social work service delivery. By presenting the research of social work scholars, all experts in specific research areas, the editors clarify the value that social work brings to the larger realm of health care for older adults and their families. Special consideration is given to such issues as case management, urban, African-American elders, grandmothers raising grandchildren, aging persons with developmental disabilities, home health care, and more. Applying Metalytics to Measure Customer Experience in the Metaverse May 05 2020 In many ways, the appearance of the metaverse is an unparalleled progression. A number of new technologies have come together to enable its vision. Augmented reality (AR) and virtual reality (VR) headsets have become cheaper and more powerful improving the user experience. Blockchain has enabled digital currencies and NFTs. The new methods to transact and own digital goods are allowing creators to monetize their activities through tokens. In addition to monetization, and as a means to exchange value, token-holders can also participate in the platform's governance (e.g., vote on decisions). This democratic ownership economy coupled with the possibility of interoperability could unlock immense economic opportunities whereby digital goods and services are no longer captive to a singular gaming platform or brand. As the world steps into the metaverse, it is imperative to spark conversations with all objects and those interacting within the next dimension. Applying Metalytics to Measure Customer Experience in the Metaverse introduces metalytics, a new perspective on analytics for the new dimension of spatial and immersive Web 3.0. It presents the new conversations in the elements of a new digital age converging at a large scale. Covering topics such as big data analytics, financial services, and network analysis, this premier reference source is an essential resource for business leaders and executives, IT managers, entrepreneurs, financial specialists, consultants, statisticians, marketers, government officials, students and educators of higher education, librarians, researchers, and academicians.

Exploring Services Science Mar 03 2020 This book contains the refereed proceedings of the Third International Conference on Exploring Services Science (IESS) which was held in Geneva, Switzerland, in February 2012. At the conference, researchers from all over the world presented innovative ideas, research, and applications in the design, management, and evaluation of services. This year, the main theme was the interdisciplinary aspect of services. The 22 full papers accepted for IESS were selected from 46 submissions and presented ideas and results related to innovation, services discovery, services engineering, and services management as well as the application of services in information technology, business, e-learning and public administration.
