Latvia Sep 29 2022 The past one hundred years have been a very trying time for Latvia, complete with success, tragedy, and still unrealized promise. Within the course of a generation, the country experienced revolutions, wars and independent statehood, and then the slide into authoritarianism. World War II brought new occupations. The tragedies were staggering: holocaust, executions, and an exodus of refugees. Soviet consolidation bred deportations, forced collectivization and partisan warfare. Almost fifty years later, Latvia regained its independence and emerged from decades of disastrous Soviet rule. This book comprehensively surveys Latvia's recent past and prospects for the new millennium, placing contemporary events in historical perspective. The authors address the evolution of the country from the movement against Soviet rule to the dilemmas of contemporary politics: party formation, the problem of corruption, the quest for the future and a regional and international role, the struggle to develop a civil society, the issue of ethnic relations and the recurring tendency towards statist solutions. Proper attention is also given to economic developments.

Strategy, Innovation, and Change Sep 05 2020 Any organization must ask three interrelated questions in order to develop its strategy: where are we, where do we want to be, and how will we get there? While the questions do not change over time, the realities and environments that companies face do. Given today's realities, how should companies answer these questions as they face the challenges of the 21st century? In this book, leading business school educators use their academic, yet managerially-relevant, research to explore these questions. They divide the book into three sections - Understand Your Situation, Develop Your Options, and Lead the Change - and take the reader through some of the latest thinking that helps answer these questions. All the authors have extensive international experience of working with senior managers and are well known academic researchers in their field. They present their ideas in a straightforward, lively, and purposeful way. Their goal is to inform, challenge, and provide practical advice and tools. The book serves as a guide to a range of contemporary business challenges, such as managing uncertainty, creating new markets through innovation, energizing people, leading clever people in organizations with limited hierarchy, and introducing radical change. The central focus is on the core concerns and responsibilities of senior management - strategy and leadership. Clear, crisp, and to the point, this book provides an invaluable and coherent summary of some of the best current business school thinking on contemporary challenges facing organizations. It will be an ideal guide for both MBAs and practicing managers.

Everyday Youth Cultures in the Gulf Peninsula Sep 17 2021 Focusing on the struggles of youth in the Arabian Gulf to find their place in their encounters with modernity, Everyday Youth Cultures in the Gulf Peninsula explores how global forces are reshaping everyday cultural experiences in authoritarian societies. A deeper understanding of Gulf youth emerges from reading about the everyday lives and struggles, opportunities, and contributions of youth who, in the process of developing their personal identities, are also incrementally transforming their societies and cultures. Based on ethnographic fieldwork in Kuwait, Oman, Saudi Arabia, the UAE, and Qatar, the chapters bring fresh insight into Gulf youth microcultures from the ground and invite dialogue by engaging young local and foreign academics in the discussion. In light of the general difficulties of accessing Gulf societies, the book's nuanced, richly detailed depictions of everyday life can be of interest to academic research in Middle East studies, youth sociology, political science and anthropology, as well as to business and governmental decision-making.

Solutions for Climate Change Challenges in the Built Environment Oct 19 2021 The multi-disciplinary perspective provided here offers a strategic view on built environment issues and improve understanding of how built environment activities potentially induce global warming and climate change. It also highlights solutions to these challenges. Solutions to Climate change Challenges in the Built Environment helps develop an appreciation of the diverse themes of the climate change debate across the built environment continuum. A wide perspective is provided through contributions from physical, environmental, social, economic and political scientists. This strategic view on built environment issues will be useful to researchers as well as policy experts and construction practitioners wanting a holistic view. This book clarifies complex issues around climate change and follows five main themes: climate change experiences; urban landscape development; urban management issues; measurement of impact; and the future. Chapters are written by eminent specialists from both academic and professional backgrounds. The main context for chapters is the developed world but the discussion is widened to incorporate regional issues. The book will be valuable to researchers and students in all the built environment disciplines, as well as to practitioners involved with the design, construction and maintenance of buildings, and government organisations developing and implementing climate change policy.

Human Rights Approaches to Climate Change Apr 12 2021 Despite the clear link between climate change and human rights with the potential for virtually all protected rights to be undermined as a result of climate change, its catastrophic impact on human beings was not really understood as a human rights issue until recently. This book examines the link between climate change and human rights in a comprehensive manner. It looks at human rights approaches to climate change, including the jurisprudential bases for human rights and the environment, the theoretical framework governing human rights and the environment, and the different approaches to this including benchmarks. In addition to a discussion of human rights implications of international environmental law principles in the climate change regime, the book explores how the human rights framework can be used in relation to mitigation, adaptation, and adjudication. Other chapters examine how vulnerable groups – women, indigenous peoples and climate "refugees" – would be disproportionately affected by climate change. The book then goes on to discuss a new category of people created by climate change, those who will be rendered stateless as a result of states disappearing and displaced by climate change, and whether human rights law can adequately address these emerging issues.

Family Troubles? Mar 31 2020 As the everyday family lives of children and young people come to be increasingly defined as matters of public policy and concern, it is important to raise the question of how we can understand the contested terrain between "normal" family troubles and troubled and troubling families. In this important, timely and thought-provoking publication, a wide range of contributors explore how "troubles" feature in "normal" families, and how the "normal" features in "troubled" families. Drawing on research on a wide range of substantive topics - including infant care, sibling conflict, divorce, disability, illness, migration and asylum-seeking, substance misuse, violence, kinship care, and forced marriage - the contributors aim to promote dialogue between researchers addressing mainstream family change and diversity in everyday lives, and those specialising in specific problems which prompt professional interventions. In tackling these contentious and difficult issues across a variety of topics, the book addresses a wide audience, including policy makers, service users and practitioners, as well as family studies scholars more generally who are interested in issues of family change.

Mastering the Challenges of Leading Change Jul 16 2021 Conquer the most daunting change initiative with the right people, tools, and strategies. James Dallas' *Mastering the Challenges of Leading Change* is an informative, insightful guide to effectively leading the transition through change. While most change management books present case studies about what happened at other companies, this book is based on the author's own experiences managing over 10 transformational and turnaround initiatives, 15 acquisition integrations, and 5 operations/quality shared services centers of excellence. By relating personal lessons learned, how they were subsequently applied, and how you can benefit from them, this book provides a unique first-hand perspective on successful agents of change. You'll learn the qualities and skills required to usher in the new paradigm, and how to break a large initiative into manageable chunks that are more likely to proceed as planned. By crafting your strategy based on proven methods, you're far and away more likely to meet or even exceed your change objectives. The majority of change initiatives fail because people mistakenly think that a change agent is the same as a project leader. They're not. This book shows you why, and how get the tools, strategies, and people you need at the helm of your initiative to come out the other side much stronger as an organization. Learn the critical skills required for effective change management Assess the difficulty and politics of a change initiative Choose the right people to help implement the change See past obstacles and lead effectively in a crisis Change is occurring within and across all industries, countries, and organizations. They begin with the best of intentions, but most fail to meet their objectives. Don't let your organization be one of the failures. *Mastering the Challenges of Leading Change* shows you how to plan, lead, and manage a successful transition.

The Dance of Change Mar 24 2022 Since Peter Senge published his groundbreaking book *The Fifth Discipline*, he and his associates have frequently been asked by the business community: "How do we go beyond the first steps of corporate change? How do we sustain momentum?" They know that companies and organizations cannot thrive today without learning to adapt their attitudes and practices. But companies that establish change initiatives discover, after initial success, that even the most promising efforts to transform or revitalize organizations—despite interest, resources, and compelling business results—can fail to sustain themselves over time. That's because organizations have complex, well-developed immune systems, aimed at preserving the status quo. Now, drawing upon new theories about leadership and the long-term success of change initiatives, and based upon twenty-five years of experience building learning organizations, the authors of *The Fifth Discipline Fieldbook* show how to accelerate success and avoid the obstacles that can stall momentum. *The Dance of Change*, written for managers and executives at every level of an organization, reveals how business leaders can work together to anticipate the challenges that profound change will ultimately force the organization to face. Then, in a down-to-earth and compellingly clear format, readers will learn how to build the personal and organizational capabilities needed to meet those challenges. These challenges are not imposed from the outside; they are the product of assumptions and practices that people take for granted—an inherent, natural part of the processes of change. And they can stop innovation cold, unless managers at all levels learn to anticipate them and recognize the hidden rewards in each challenge, and the potential to spur further growth. Within the frequently encountered challenge of "Not Enough Time," for example—the lack of control over time available for innovation and learning initiatives—lies a valuable opportunity to reframe the way people organize their workplaces. This book identifies universal challenges that organizations ultimately find themselves confronting, including the challenge of "Fear and Anxiety"; the need to diffuse learning across organizational boundaries; the ways in which assumptions built in to corporate measurement systems can handcuff learning initiatives; and the almost unavoidable misunderstandings between "true believers" and nonbelievers in a company. Filled with individual and team exercises, in-depth accounts of sustaining learning initiatives by managers and leaders in the field, and well-tested practical advice, *The Dance of Change* provides an insider's perspective on implementing learning and change initiatives at such corporations as British Petroleum, Chrysler, Dupont, Ford, General Electric, Harley-Davidson, Hewlett-Packard, Mitsubishi Electric, Royal DutchShell, Shell Oil Company, Toyota, the United States Army, and Xerox. It offers crucial advice for line-level managers, executive leaders, internal networkers, educators, and others who are struggling to put change initiatives into practice.

Addressing the Challenges in Communicating Climate Change Across Various Audiences Nov 27 2019 This book offers a concrete contribution towards a better understanding of climate change communication. It ultimately helps to catalyse the sort of cross-sectoral action needed to address the phenomenon of climate change and its many consequences. There is a perceived need to foster a better understanding of what climate change is, and to identify approaches, processes, methods and tools which may help to better communicate it. There is also a need for successful examples showing how communication can take place across society and stakeholders. Addressing the challenges in communicating to various audiences and providing a platform for reflections, it showcases lessons learnt from research, field projects and best practices in various different countries. The acquired knowledge can be adapted and applied to other situations.

Challenges and Solutions for Climate Change May 14 2021 The latest scientific knowledge on climate change indicates that higher greenhouse gas concentrations in the atmosphere through unchecked emissions will provoke severe climate change and ocean acidification. Both impacts can fundamentally alter environmental structures on which humanity relies and have serious consequences for the food chain among others. Climate change therefore poses major socio-economic, technical and environmental challenges which will have serious impacts on countries' pathways towards sustainable development. As a result, climate change and sustainable development have increasingly become interlinked. A changing climate makes achieving Millennium Development Goals more difficult and expensive, so there is every reason to achieve development goals with low greenhouse gas emissions. This leads to the following five challenges discussed by *Challenges and Solutions for Climate Change*: 1. To place climate negotiations in the wider context of sustainability, equity and social change so that development benefits can be maximised at the same time as decreasing greenhouse gas emissions. 2. To select technologies or measures for climate change mitigation and adaptation based on countries' sustainable development and climate goals. 3. To create low greenhouse gas emission and climate resilient strategies and action plans in order to accelerate innovation needed for achieving sustainable development and climate goals on the scale and timescale required within countries. 4. To rationalize the current directions in international climate policy making in order to provide coherent and efficient support to developing countries in devising and implementing strategies and action plans for low emission technology transfers to deliver climate and sustainable development goals. 5. To facilitate development of an international framework for financial resources in order to support technology development and transfer, improve enabling environments for innovation, address equity issues such as poor people's energy access, and make implementation of activities possible at the desired scale within the country. The solutions presented in *Challenges and Solutions for Climate Change* show how ambitious measures can be undertaken which are fully in line with domestic interests, both in developing and in developed countries, and how these measures can be supported through the international mechanisms.

Modern Day Challenges in Academia Sep 25 2019 Examining the modern day challenges faced by academics throughout their working lives, this timely book investigates the ways in which academic careers are changing, the reasons for these changes and their potential future impacts. Contributors with insider experience of both traditional research focussed universities and newer institutions with an emphasis on teaching, utilise theoretical and empirical methods to provide international perspectives on the key issues confronting modern day academics.

Complexity, Management and the Dynamics of Change Jun 26 2022 The insights of complexity science can allow today's managers to embrace the challenges and uncertainty of the twenty-first century, and successfully oversee organizational change and development. Elizabeth McMillan's book brings these ideas into perspective by: outlining the historical relationship between science and organizations reviewing current perspectives on organizational change and best practice citing real-life examples of the use of complexity science ideas discussing issues which may arise when using ideas from complexity. Written in an accessible style to bridge the gap from scientific theory to commercial applicability, this text shows how organizations can become more effective, democratic and sustainable through complexity science.

Climate Change and Energy Insecurity Oct 26 2019 Climate change is now recognised as one of the greatest challenges facing the international community and when coupled with energy production and use - the most significant contributor to climate change - and the related security problems the double threat to international security and human development is of the highest order. This wide-ranging book brings together leading thinkers from academia, government and civil society to examine and address the global insecurity and development challenges arising from the twin thrust of climate change and the energy supply crunch. Part one considers energy. It analyses the challenges of meeting future energy demands and the ongoing and future security-related conflicts over energy. Coverage includes security and development concerns related to the oil and gas, nuclear, bio-fuels and hydropower sectors, ensuring energy access for all and addressing sustainable consumption and production in both developed and rapidly industrializing countries such as India, China, Brazil and South Africa. Part two analyses how climate change contributes to global insecurity and presents a consolidated overview of the potential threats and challenges it poses to international peace and development. Coverage includes future water scenarios including a focus on scarcity in the Middle East, food security, biodiversity loss, land degradation, the changing economics of climate change, adaptation and the special case of small island states. The final part lays out the potential avenues and mechanisms available to the international community to address and avert climate and energy instability via the multilateral framework under the United Nations. It also addresses mechanisms for resource and knowledge transfer from industrialized to developing countries to ensure a low-carbon energy transition by focusing on the rapid deployment of clean energy technologies and ways to tackle income and employment insecurity created by the transition away from traditional energy sources. This book offers the most comprehensive international assessment of the challenges and solutions for tackling the global insecurity arising from climate change and energy provision and use. It is essential reading for students, researchers and professionals across international relations, security, climate change and the energy sectors.

Social Change Feb 29 2020 Different types of social change agents and catalysts in society operate in a wide range of sectors and industries. In the first chapter, some major theoretical perspectives in the study of social change and individual socioemotional functioning are reviewed. The authors of the second chapter explore the aforementioned agents and catalysts that can create a more meaningful and lasting impact in society if efforts, strategies and resources are aligned. In the third chapter, the effect of radical social change on the diffusion of professional norms across contexts is examined. The fourth chapter helps evaluators and program managers understand the importance of considering culture in program design and evaluations, with particular emphasis on culturally specific vulnerable populations. The fifth chapter studies two social change conceptions, very popular in sociological literature: modernity and modernization. Chapter 6 explores the effect of social changes and demographic variables on the importance of work outcomes. In Chapter 7, the authors describe the impact of social welfare and government trust in society on its citizens. The authors of Chapter 8 discuss the recent developments of school music education in China, focusing on Beijing and its long and rich history dating back more than 3,000 years. Chapter 9 aims to investigate the role of entrepreneurial ecosystem in the various steps of the development of a start-up and to verify the role of the social mission as an enabler factor in the enhancement of relationship with the actors in the ecosystem. In Chapter 10, the author theoretically develops and empirically tests for the utility of the concept of social intermediaries (SI) in explaining social change. The last chapter of the book aims to give an account of the process of development, adaptation and change in the social structure at the microlevel, as a result of changes in the policies of development and the alteration of the global order.

Climate Change: Global Risks, Challenges and Decisions Jun 02 2020 Providing an up-to-date synthesis of all knowledge relevant to the climate change issue, this book ranges from the basic science documenting the need for policy action to the technologies, economic instruments and political strategies that can be employed in response to climate change. Ethical and cultural issues constraining the societal response to climate change are also discussed. This book provides a handbook for those who want to understand and contribute to meeting this challenge. It covers a very wide range of disciplines - core biophysical sciences involved with climate change (geosciences, atmospheric sciences, ocean sciences, ecology/biology) as well as economics, political science, health sciences, institutions and governance, sociology, ethics and philosophy, and engineering. As such it will be invaluable for a wide range of researchers and professionals wanting a cutting-edge synthesis of climate change issues, and for advanced student courses on climate change.

Challenge for Change Oct 07 2020 An examination of the radical politics and cinema of the legendary documentary film program devoted to social change.

Museums and the Challenge of Change May 26 2022 Museums and the Challenge of Change explores the profound challenges facing museums and charts ways forward that are grounded in partnership with audiences and communities on-site, online, and in wider society. Facing new generations with growing needs and desires, growing population diversity, and a digital revolution, the museum sector knows it must change - but it has been slow to respond. Drawing on the expertise and voices of practitioners from within and beyond the sector, Black calls for a change of mind-set and radical evolution (transformation over time, learning from the process, rather than a 'big bang' approach). Internally, a participative environment supports social interaction through active engagement with collections and content - and Black includes an initial typology of participative exhibits, both traditional and digital. Externally, the museum works in partnership with local communities and other agencies to make a real difference, in response to societal challenges. Black considers what this means for the management and structure of the museum, emphasising that it is not possible to separate the development of a participative experience from the ways in which the museum is organised. Museums and the Challenge of Change is highly practical and focused on initiatives that museums can implement swiftly and cheaply, making a real impact on user engagement. The book will thus be essential reading for museum practitioners and students of museum studies around the globe.

Climate Change and Aviation Jan 28 2020 'This is a timely, challenging and fascinating book on a topic of central importance to the success or otherwise of our climate change policies. It sets down a clear marker for what has to be done in the aviation sector.' Professor John Whitelegg, Stockholm Environment Institute, University of York, UK 'Climate Change and Aviation presents a clear picture of the transport sector's greatest challenge: how to reconcile aviation's immense popularity with its considerable environmental damage and its dependence on liquid hydrocarbon energy sources. This book avoids wishful thinking and takes the much harder, but more productive, path of considering difficult solutions that clash with short-term and short-sighted expectations about the unlimited growth potential for flying.' Professor Anthony Perl, Urban Studies Program, Simon Fraser University, Canada 'A convincing and timely collection that brings together an impressive range of expertise. The book integrates various perspectives into a powerful core argument - we must do something, and quickly, to tackle the impact of aviation on our environment. The authors recognise the political difficulties associated with promoting change but present constructive options for policy makers. Required reading, especially for transport ministers set on promoting the growth of air travel.' Professor Jon Shaw, Director of the Centre for Sustainable Transport, University of Plymouth, UK Trends such as the massive growth in availability of air travel and air freight are among those which have led to aviation becoming one of the fastest growing emitters of greenhouse gases. These trends have also caused a shift in expectations of how we do business, where we go on holiday, and what food and goods we can buy. For these reasons aviation is (and is set to stay) high up on global political, organizational and media agendas. This textbook is the first to attempt a comprehensive review of the topic, bringing together an international team of leading scientists. Starting with the science of the environmental issues, it moves on to cover drivers and trends of growth, socio-economics and politics, as well as mitigation options, the result being a broad yet detailed examination of the field. This is essential reading for undergraduate and postgraduate courses in transport, tourism, the environment, geography and beyond, while also being a valuable resource for professionals and policymakers seeking a clear understanding of this complex yet urgently pressing issue.

New Challenges to Food Security May 02 2020 Food security is high on the political agenda. Fears about societal insecurity due to food price increases and hunger, grave scenarios regarding the effects of climate change and general uncertainty about the impacts of investments in biofuels and so-call " land grabbing " on food prices and availability have meant that food security is now recognised as being a multifaceted challenge. This book is unique in that it will bring together analyses of these different factors that impact on food security. This volume will describe a range of different perspectives on food security, with an emphasis on the various meanings that are applied to food security " crisis " . The challenges to be reviewed include market volatility, climate change and state fragility. Analyses of responses to food security crises and risk will cover rural and urban contexts, arenas of national policy formation and global food regimes, and investment in land and productive technologies. This book is unique in two respects. First, it takes a step back from the normative literature focused on specific factors of, for example, climate change, agricultural production or market volatility to look instead at the dynamic interplay between these new challenges. It helps readers to understand that food security is not one discourse, but is rather related to how these different factors generate multiple risks and opportunities. Second, through the case studies the book particularly emphasises how these factors come together at local levels as farmers, entrepreneurs, consumers, local government officials and others are making key decisions about what will be done to address food security and whose food security will be given priority. The book will explore how food production and consumption is embedded in powerful political and market forces and how these influence local actions.

Challenge of Organizational Change Aug 29 2022 In an era of increased global competition, of business takeovers, downsizing, restructuring, and even outright failure, intelligent organizational change is the most difficult challenge facing American business. The authors present a comprehensive overview which will be essential for managers.

The Challenge to Change Feb 20 2022 There is constant pressure on hospitals to improve health care delivery and increase cost effectiveness. New initiatives are the order of the day in the dramatically different health care systems of the United States and Great Britain. Often, as we know all too well, these efforts are not successful. In The Challenge to Change, Rebecca Kolins Givan analyzes the successes and failures of efforts to improve hospitals and explains what factors make it likely that the implementation of reforms will be rewarded by positive transformation in a particular institution ' s day-to-day operation. Givan ' s in-depth qualitative case studies of both top-down initiatives and changes first suggested by staff on the front lines of care point clearly to the importance of all hospital workers in effecting change and even influencing national policy. Givan illuminates the critical role of workers, managers, and unions in enabling or constraining changes in policies and procedures and ensuring their implementation. Givan spotlights an Anglo-American model of hospital care and work organization, even while these countries retain their differences in access and payment. Entrenched professional roles, hierarchical workplace organization, and the sometimes-detached view of policymakers all shape the prospects for change in hospitals. Givan provides important examples of how the dedication and imagination of the people who work in hospitals can make all the difference when it comes to providing quality health care even in a challenging economic environment.

The Challenges of Educational Change Jul 04 2020 On a summer day in 1942, Anne Frank and her family went into hiding from the Nazis. Until the day they arrested her, more than two years later, she kept a diary. ANNE FRANK is the indispensable visual guide to her tragic, but inspiring story. Produced in association with The Anne Frank House and filled with never-before-published snapshots, school pictures, and photos of the diary and the Secret Annex, this elegantly designed album is both a stand-alone introduction to Anne's life and a photographic companion to a classic of Holocaust literature.
