English Made Easy Volume Two: British Edition Apr 20 2022 This is a fun and user–friendly way to learn English English Made Easy is a breakthrough in English language learning—imaginatively exploiting how pictures and text can work together to create understanding and help learners learn more productively. It gives beginner English learners easy access to the vocabulary, grammar and functions of English as it is actually used in a comprehensive range of social situations. Self–guided students and classroom learners alike will be delighted by the way they are helped to progress easily from one unit to the next, using a combination of pictures and text to discover for themselves how English works. The pictorial method used in this book is based on a thorough understanding of language structure and how language is successfully learned. The authors are experienced English language teachers with strong backgrounds in language analysis and language learning. English Made Easy, Volume 2 consists of a total of 20 units arranged in groups of five. The first four units present language and provide learners the opportunities to practice as they learn. The first page of each unit has a list of all the words and phrases to be learned in that unit, together with a pronunciation guide. At the end of each unit, an interesting story which uses the language that has just been learned is presented. The fifth unit in each group contains exercises designed to reinforce the language learned in the first four units.

Deep Learning Feb 06 2021 An introduction to a broad range of topics in deep learning, covering mathematical and conceptual background, deep learning techniques used in industry, and research perspectives. "Written by three experts in the field, Deep Learning is the only comprehensive book on the subject." —Elon Musk, cochair of OpenAI; cofounder and CEO of Tesla and SpaceX Deep learning is a form of machine learning that enables computers to learn from experience and understand the world in terms of a hierarchy of concepts. Because the computer gathers knowledge from experience, there is no need for a human computer operator to formally specify all the knowledge that the computer needs. The hierarchy of concepts allows the computer to learn complicated concepts by building them out of simpler ones; a graph of these hierarchies would be many layers deep. This book introduces a broad range of topics in deep learning. The text offers mathematical and conceptual background, covering relevant concepts in linear algebra, probability theory and information theory, numerical computation, and machine learning. It describes deep learning techniques used by practitioners in industry, including deep feedforward networks, regularization, optimization algorithms, convolutional networks, sequence modeling, and practical methodology; and it surveys such applications as natural language processing, speech recognition, computer vision, online recommendation systems, bioinformatics, and videogames. Finally, the book offers research perspectives, covering such theoretical topics as linear factor models, autoencoders, representation learning, structured probabilistic models, Monte Carlo methods, the partition function, approximate inference, and deep generative models. Deep Learning can be used by undergraduate or graduate students planning careers in either industry or research, and by software engineers who want to begin using deep learning in their products or platforms. A website offers supplementary material for both readers and instructors.

Contemporary Pioneers in Teaching and Learning Volume 2 Nov 15 2021 This volume traces the socialization process, professional development, career paths, and theory and research of contemporary

pioneers in education and psychology. This volume contains interviews with leading scholars who are at the vanguard of teaching and learning. They shared how their childhood development influenced their theoretical paths and research endeavors and revealed their thoughts, beliefs, and experiences that made them who they are today. These scholars responded to questions pertaining to their childhood, initial interest in education and psychology, role models, research interests and major findings, future directions of their research, educational implications derived from their research, and perception of their legacy. They are real people who have had experiences like anybody else, but found homes and teachers who supported them. While in college, they found educators who mentored them. Readers will find that this volume offers them an opportunity to learn the background of contemporary pioneers in education and psychology, provides valuable sources where they can learn about how major theories developed and where they are moving, and reveals the personal anecdotes that influenced the conceptualization of contemporary theories and research. Educators and students will find that this book provides hope and a rejuvenated enthusiasm about the status of education and psychology and that they too can be leaders in their own ways.

Children's Play, Learning and Development Jun 17 2019 Resources designed to support learners of the new next generation BTEC First in Children's Play, Learning and Development specification*. Covers the underpinning knowledge and understanding for all core, mandatory and optional units for the Award and Certificate and all core and mandatory units for the Extended Certificate. The attractive, accessible layout is packed with learning features, which draw out key points and bring topics to life. Provides support and practice for learners as they work towards the Award, Certificate and Extended Certificate. Units include plenty of activities and assessment guidance to help learners achieve their potential. Case Studies reflect the work-related nature of the qualification, so that learners are more able to put theory into practice in real-world settings. Assessment activities help learners to achieve their potential in internally-assessed units and support external assessment. * From 2012, Pearson's BTEC First qualifications have been under re-development, so schools and colleges could be teaching the existing 2010 specification or the new next generation 2012-2013 specification. There are different Student Books to support each specification. If learners are unsure, they should check with their teacher or tutor.

Deep Reading, Deep Learning Dec 04 2020 "This new volume addresses a number of important issues related to reading and writing we did not attend to in our previous volume, Deep Reading: Teaching Reading in the Writing Classroom (NCTE 2017)--especially those related to identity, culture, and positionality. We seek in this volume to address the broad question of equity and social justice in the acquisition and practice of literacy, and the multifaceted lived reality of positionality related especially to race, class, language, and gender as experienced by students in the classroom"--

Computer Vision and Machine Learning in Agriculture, Volume 2 Jun 10 2021 This book is as an extension of previous book "Computer Vision and Machine Learning in Agriculture" for academicians, researchers, and professionals interested in solving the problems of agricultural plants and products for boosting production by rendering the advanced machine learning including deep learning tools and techniques to computer vision algorithms. The book contains 15 chapters. The first three chapters are devoted to crops harvesting, weed, and multi-class crops detection with the help of robots and UAVs through machine learning and deep learning algorithms for smart agriculture. Next, two chapters describe agricultural data retrievals and data collections. Chapters 6, 7, 8 and 9 focuses on yield estimation, crop maturity detection, agri-food product quality assessment, and medicinal plant recognition, respectively. The remaining six chapters concentrates on optimized disease recognition through computer vision-based machine and deep learning strategies.

Blended Learning Dec 24 2019 Blended Learning: Research Perspectives, Volume 3 offers new insights into the state of blended learning, an instructional modality that combines face-to-face and digitally mediated experiences. Education has recently seen remarkable advances in instructional technologies such as adaptive and personalized instruction, virtual learning environments, gaming, analytics, and big data software. This book examines how these and other evolving tools are fueling advances in our schools, colleges, and universities. Original scholarship from education's top thinkers will prepare researchers and learning designers to tackle major issues relating to learning effectiveness, diversity, economies of scale, and beyond.

An Introduction to Statistical Learning Mar 27 2020 An Introduction to Statistical Learning provides an accessible overview of the field of statistical learning, an essential toolset for making sense of the vast and complex data sets that have emerged in fields ranging from biology to finance to marketing to astrophysics in the past twenty years. This book presents some of the most important modeling and prediction techniques, along with relevant applications. Topics include linear regression, classification, resampling methods, shrinkage approaches, tree-based methods, support vector machines, clustering, and more. Color graphics and real-world examples are used to illustrate the methods presented. Since the goal of this textbook is to facilitate the use of these statistical learning techniques by practitioners in science, industry, and other fields, each chapter contains a tutorial on implementing the analyses and methods presented in R, an extremely popular open source statistical software platform. Two of the

authors co-wrote The Elements of Statistical Learning (Hastie, Tibshirani and Friedman, 2nd edition 2009), a popular reference book for statistics and machine learning researchers. An Introduction to Statistical Learning covers many of the same topics, but at a level accessible to a much broader audience. This book is targeted at statisticians and non-statisticians alike who wish to use cutting-edge statistical learning techniques to analyze their data. The text assumes only a previous course in linear regression and no knowledge of matrix algebra.

Dynamics of Learning in Neanderthals and Modern Humans Volume 2 Aug 12 2021 This volume is the second of two volumes of proceedings from the International Conference on the Replacement of Neanderthals by Modern Humans, which took place in Tokyo in November 2012. This second volume reports, in four major sections, findings by cultural anthropologists, physical anthropologists, engineering scientists and neurophysiologists, integrated in multidisciplinary fashion to solidify the overall understanding of the mechanics of replacement from cognitive and physical perspectives. Part 1 provides examinations of replacement related questions from various perspectives in cognition and psychology. Part 2, consisting of studies rooted in body science and genetics, provides detailed findings which fill in the broader frame of the replacement phenomenon. Part 3 presents a collection of papers whose findings about fossil crania and brain morphology shed direct light on immediate questions regarding replacement. Part 4 provides illuminations similar to those in part 3, but arising from the analytical empowerment afforded by neuroscience. The collection of 26 papers in this volume makes available to readers both broad and narrow insights on the mechanisms of the replacement/assimilation of Neanderthals by modern humans and at the same time provides a model of new-paradigm multidisciplinary collaboration on a complex problem.

How to Use Assessment for Learning in the Classroom Jan 17 2022 The bestselling 'How to use Assessment for Learning in the Classroom: The Complete Guide' gives classroom teachers everything they need to ensure their pupils make superb progress, no matter which subject or age group they are teaching. It is the number one tool for raising achievement in school. The book is written by a practising teacher and is unashamedly practical throughout. It contains a wide range of activities, strategies and techniques which teachers can use to embed assessment for learning in their teaching. Everything in the book is generic, meaning it can be applied across the curriculum. Sections include: Introduction to AfL; How to elicit information about students' learning; Peer-assessment activities; Self-assessment activities; How to give great feedback; Example strengths and targets; and How to make AfL work for you. Mike Gershon's teaching resources have been viewed and downloaded more than 2.7 million times in over 180 countries and territories. His books expand and develop his electronic materials, such as the Starter Generator, the Plenary Producer and the Assessment for Learning Toolkit. The 'How to...' series developed out of Mike's desire to share great classroom practice with teachers around the world. He wanted to put together a collection of books which would help professionals no matter what age group or subject they were teaching. Each volume focuses on a different element of classroom practice and each is overflowing with brilliant, practical strategies, techniques and activities - all of which are clearly explained and ready-to-use. In most cases, the ideas can be applied immediately, helping teachers not only to teach better but to save time as well. Each one goes out of its way to make teachers' lives easier and their lessons even more engaging, inspiring and successful then they already are. The 'How to...' series is great teaching made easy.

Blended Learning Sep 20 2019 Blended learning, which combines the strength of face-to-face and technology-enhanced learning, is increasingly being seen as one of the most important vehicles for education reform today. Blended learning allows both teacher and learner access to radically increased possibilities for understanding how we transmit and receive information, how we interact with others in educational settings, how we build knowledge, and how we assess what we have taught or learned. Blended Learning: Research Perspectives, Volume 2 provides readers with the most current, in-depth collection of research perspectives on this vital subject, addressing institutional issues, design and adoption issues, and learning issues, as well as an informed meditation on future trends and research in the field. As governments, foundations, schools, and colleges move forward with plans and investments for vast increases in blended learning environments, a new examination of the existing research on the topic is essential reading for all those involved in this educational transformation.

MENC Handbook of Research on Music Learning: Volume 1: Strategies Apr 27 2020 The MENC Handbook of Research on Music Learning, Volume 1: Strategies brings together the best and most current research on methods for music learning, focusing squarely on the professions empirical and conceptual knowledge of how students gain competence in music at various ages and in different contexts. The collection of chapters, written by the foremost figures active in the field, takes a broad theoretical perspective on current, critical areas of research, including music development, music listening and reading, motivation and self-regulated learning in music, music perception, and movement. The books companion volume, Applications, builds an extensive and solid position of practice upon the frameworks and research presented here. Throughout both volumes in this essential set, focus is placed on the musical knowledge and musical skills needed to perform, create, understand, reflect on, enjoy, value, and respond to music. A key point of emphasis rests on the relationship between music learning and finding meaning in music, and as music technology plays an increasingly important role in learning today, chapters move beyond exclusively formal classroom instruction into other forms of systematic learning and informal instruction. Either individually or paired with its companion Volume 2: Applications, this indispensable overview of this growing area of inquiry will appeal to students and scholars in Music Education, as well as front-line music educators in the classroom.

Handbook of Learning and Cognitive Processes (Volume 2) Jun 22 2022 Originally published in 1975, Volume 2 of this Handbook looks at areas traditionally associated with learning theory such as

conditioning, discrimination and behavior theory. It deals with concepts and theories growing principally out of laboratory studies of conditioning and learning. The intention was to treat mechanisms, processes, and principles of some generality – applicable at least to all vertebrates. It was becoming well understood that detailed interpretations of particular behaviors required the authors to take account of the way general principles operate in the context of species-specific behavioral organizations and developmental histories; but detailed consideration of just how these interpretations were accomplished for different animal forms was another enterprise. Here the authors limit their task to abstracting from the enormous literature facts and ideas which seemed general enough to be of interest and perhaps utility to investigators in other disciplines at the time. Volume 1 presented an overview of the field and introduced the principal theoretical and methodological issues that persistently recurred in the expanded treatments of specific research areas that comprise the later volumes. Volume 3 looks at human learning and motivation, while the last 3 volumes range over the many active lines of research identified with human cognitive processes at the time.
