Foundation Website Creation with HTML5, CSS3, and JavaScript Nov 22 2019 Foundation Website Creation with HTML5, CSS3, and JavaScript shows the entire process of building a website. This process involves much more than just technical knowledge, and this book provides all the information you'll need to understand the concepts behind designing and developing for the Web, as well as the best means to deliver professional results based on best practices. Of course, there is far more to building a successful website than knowing a little Hypertext Markup Language (HTML). The process starts long before any coding takes place, and this book introduces you to the agile development process, explaining why this method makes so much sense for web projects and how best to implement it. We also make sure you're up to date by using the latest HTML5 features. Planning is vital, so you'll also learn to use techniques such as brainstorming, wireframes, mockups, and prototypes to get your project off to the best possible start and help ensure smooth progress as it develops. An understanding of correct, semantic markup is essential for any web professional; this book explains how HTML5 should be used to structure content so that the markup adheres to current web standards. You'll learn about the wide range of HTML5 elements available to you, and you'll learn how and when to use them through building example web pages. Without creative use of Cascading Style Sheets (CSS), websites would all look largely the same. CSS enables you to set your website apart from the rest, while maintaining the integrity of your markup. We'll showcase the new features of CSS3 and how you can use them. You'll learn how CSS3 works and how to apply styles to your pages, allowing you to realize your design ideas in the browser. JavaScript can be used to make your website easier and more interesting to use. This book provides information on appropriate uses of this technology and introduces the concepts of JavaScript programming. You'll also see how JavaScript works as part of the much-hyped technique Ajax, and in turn, where Ajax fits into the wider Web 2.0 picture. While a website is being built, it needs to be tested across multiple browsers and platforms to ensure that the site works for all users, regardless of ability or disability, and this book explains how best to accomplish these tasks. Then, it discusses the process of launching and maintaining the site so that it will continue to work for all its users throughout its life cycle. Foundation Website Creation with HTML5, CSS3, and JavaScript concludes by covering server-side technologies, acting as a guide to the different options available. With insights from renowned experts such as Jason Fried of 37signals, Daniel Burka of Digg and Pownce, and Chris Messina of Citizen Agency, Foundation Website Creation with CSS, XHTML, and JavaScript provides invaluable information applicable to every web project—regardless of size, scope, or budget.

Managing Quality Fads Jan 05 2021 Can managers learn from fads? That is the question Robert Cole addresses in this insightful book about the various factors supporting and inhibiting organizational learning. A longtime student of the Japanese and American quality movements, Cole focuses on the response of American industry to the challenge posed in the early 1980s by high quality goods from Japan. While most American managers view this challenge as slowly but successfully met, many academics see the quality movement that emerged from it as just another fad. In seeking to reconcile these two views, Cole explores the reasons behind American industry's slow response to Japanese quality, arguing that a variety of institutional factors inhibited management action in the early 1980s. He then describes the reshaping of institutions that allowed American companies to close the quality gap and to achieve sustained quality improvements in the 1990s. Hewlett-Packard serves as an example of a company that made this institutional transition more effectively than most. Cole describes Hewlett-Packard's successful strategies while also pointing out the serious problems that it and other companies face as they attempt to adapt, improve, and go beyond Japanese practices. He also uses Hewlett-Packard, an exemplar of the highly decentralized company, to explore effective strategies for the creation, dissemination, and implementation of knowledge. Unprecedented as a scholarly treatment of the quality movement,Managing Quality Fads provides several important lessons for those interested in management decision making under conditions of uncertainty and organizational transformation in a rapidly changing business environment.

The Loop Sep 01 2020 This eye-opening narrative journey into the rapidly changing world of artificial intelligence reveals the dangerous ways AI is exploiting the unconscious habits of our minds—and the real threat it poses to humanity. Artificial intelligence is going to change the world as we know it. But the real danger isn't some robot that's going to enslave us: It's our own brain. Our brains are constantly making decisions using shortcuts, biases, and hidden processes—and we're using those same techniques to create technology that makes choices for us. In The Loop, award-winning science journalist Jacob Ward reveals how we are poised to build all of our worst instincts into our AIs, creating a narrow loop where each generation has fewer, predetermined, and even dangerous choices. Taking us on a world tour of the ongoing, real-world experiment of artificial intelligence, The Loop illuminates the dangers of writing dangerous human habits into our machines. From a biometric surveillance state in India that tracks the movements of over a billion people, to a social media control system in China that punishes deviant friendships, to the risky multiple-choice simplicity of automated military action, Ward travels the world speaking with top experts confronting the perils of their research. Each stop reveals how the most obvious patterns in our behavior—patterns an algorithm will use to make decisions about what's best for us—are not the ones we want to perpetuate. Just as politics, marketing, and finance have all exploited the weaknesses of our human programming, artificial intelligence is poised to use the patterns of our lives to manipulate us. The Loop is call to look at ourselves more clearly—our most creative ideas, our most destructive impulses, the ways we help and hurt one another-so we can put only the best parts of ourselves into the thinking machines we create.

Diagnosis of Process Nonlinearities and Valve Stiction Dec 24 2019 were published in the series as the contributed volume, Process Control Performance Assessment: From Theory to Implementation with Andrzej Ordys, Damian Uduehi, and Michael Johnson as Editors (ISBN 978-1-84628-623-0, 2007). Along with this good progress in process controller assessment methods, researchers have also been investigating techniques to diagnose what is causing the process or control loop degradation. This requires the use of on-line data to identify faults via new diagnostic indicators of typical process problems. A significant focus of some of this research has been the issue of valve problems; a research direction that has been motivated by some industrial statistics that show up to 40% of control loops having performance degradation attributable to valve problems. Shoukat Choudhury, Sirish Shah, and Nina Thornhill have been very active in this research field for a number of years and have written a coherent and consistent presentation of their many research results as this monograph, Diagnosis of Process Nonlinearities and Valve Stiction. The Advances in Industrial Control series is pleased to welcome this new and substantial contribution to the process diagnostic literature. The reader will find the exploitation of the extensive process data archives created by today's process computer systems one theme in the monograph. From another viewpoint, the use of higher-order statistics could be considered to provide a continuing link to the earlier methods of the statistical process control paradigm.

World Class Diversity Management May 29 2020 Globalization is transforming the very nature of our business relationships, decision-making processes, and interactions, making world-class diversity management more needed than ever before. But until now, the field of diversity had no established standard for evaluating best practices, or even agreement on fundamental philosophies, principles, and concepts. In this pioneering book, the world's leading diversity authority proposes a framework that will facilitate the development of a truly world-class standard for diversity management. R. Roosevelt Thomas begins by laying out his Four Quadrant model, which encompasses all core diversity strategies: managing workforce demographic representation, managing demographic relationships, managing diverse talent, and managing all strategic diversity mixtures. He analyzes the goals, motives, approaches, accomplishments, and challenges associated with each quadrant, as well as the paradigm or mindset that lies behind each quadrant's express purpose. Having laid out this broad range of strategies, Thomas shows how to realize them through the Strategic Diversity Management Process™, by far the most effective method for implementation. A detailed case study of CEO Jeff Kilt—a fictional composite of the many executives Thomas has worked with—effectively illustrates the complexities encountered when working with each of the Four Quadrant strategies in the real world. This book offers a comprehensive blueprint that will enable leaders to address any diversity issue (not just race or gender) in any setting, anywhere in the world. Most important, it proves that a world-class standard of diversity management is indeed a possible and achievable goal.

Beyond World Class Apr 20 2022 Being 'world class' is inextricably linked to being competitive. In this new book the author builds upon Becoming World Class and incorporates his experience of introducing fundamental changes in a number of major organisations. The author discusses how organisations can compete when competitors have also introduced the management innovations of recent years and become `lean'. He argues that success comes not from making business processes more efficient but from the contribution of people and he examines how companies can successfully motivate employees. This is an innovative book which puts forward a new approach for regional development in a global context. The author argues that the three elements of society, the firm and individual must work together to achieve economic growth in these competitive and changing times.
